Subject: ICYMI: Steel tariffs will harm U.S. energy production and American consumers

In Case You Missed It

Steel tariffs will harm U.S. energy production and American consumers

By Bruce Thompson, AXPC President The Hill Op-Ed June 20, 2018

The recently announced tariffs and quotas on steel and aluminum have sent shockwaves through business sectors across the United States. These tariffs, along with those that will soon be imposed on goods from China, will be damaging to a wide range of industries if there are not reasonable exceptions granted by the Department of Commerce. U.S. oil and natural gas production will be especially hard-hit – costing American jobs, increasing energy costs for families and businesses, and threatening our energy security.

Many people aren't aware of the integral role that steel plays in all phases of oil and natural gas development. Well construction, drilling, processing, refining, transportation and distribution all require steel and it is necessary to safely conduct our operations. The American Exploration & Production Council (AXPC) has joined forces with trade associations – energy and non-energy alike – around the country to express our concerns with the policy, and the importance of sensible exclusions for our members, all of whom depend on the ability of steel.

While we respect the goal of these tariffs and the need to support domestic metal producers, reasonable exclusions must be granted by the Department of Commerce to compensate for the lack of American pipeline-grade steel currently available.

It's no secret that the United States is in grave need of additional energy infrastructure. Pipelines and storage systems are nearing capacity across the country, and more options are needed to keep energy moving. Steel is one of the main materials used to construct pipelines and storage tanks. Unfortunately, the United States does not currently produce enough pipeline-grade steel to meet the demand for these projects. Pipeline-grade steel is a high-cost, specialty product from which most domestic manufacturers have moved away. In fact, there is zero domestic availability for certain types of steel pipeline products. As a result, the oil and gas industry is forced to rely on foreign imports to make up the difference.

A steep hike on the price of imported steel <u>does not bode well for these much-needed infrastructure</u> <u>projects</u> and will substantially increase material costs. A study conducted by the Association of Oil Pipelines

found that a 25 percent tariff on steel will result in a \$76 million cost increase for a typical pipeline project and more than a \$300 million cost increase for a major cross-country pipeline project.

Due to these tariffs, oil and gas companies will have to rethink many midstream and storage projects that are currently in the works. This could further squeeze producers at a time when they are already struggling to move or store all the oil and gas they're producing.

Thanks to the shale revolution, the United States has become the largest oil and natural gas producer in the world, and we would face a host of challenges if that progress were to be reversed. Oil and gas companies that are considering new exploration projects will be forced to reevaluate, delay, and possibly cancel their plans if they can't get the materials they need in a timely fashion and at a reasonable price. This could result in a major decline in U.S. oil and natural gas production. A cutback in production – due to restrictive trade policies – will threaten our national security and hinder our ability to achieve energy dominance.

The overall oil and gas supply chain will be impacted by a decrease in production. Though the industry has come a long way since the downturn of 2014, layoffs and other forms of cost-cutting across the energy sector will likely return if supply costs soar. Eliminating these tariffs, or at the very least, allowing for reasonable exclusions is in the best interests of American workers and businesses.

The shale renaissance trigged a complete transformation of our nation's energy landscape. Through innovation and responsible operations, America can continue to advance its energy standing. Unfortunately, these tariffs and any retaliatory tariffs on U.S. exports, will dramatically compromise our progress. The tariffs on steel and aluminum may have been enacted with America in mind, but it is Americans, by way of higher fuel costs, job layoffs, and decreased energy security, who will be hurt by the new policies.

Bruce Thompson is President of the American Exploration & Production Council (AXPC) whose membership is composed of 33 of America's premier independent natural gas and oil exploration and production companies.

Subject: Deputy Administrator Wheeler Meeting Request - July 17
Hi Tamika,
```

Please find attached a request for EPA Deputy Administrator Wheeler to meet with the Alliance to Restore Our Waterways (AROW) on July 17. AROW is a coalition made of industry stakeholders committed to helping remediate contaminated sediment in our waterways and putting these sites back into productive use.

Thank you, Marissa

Subject: Peabody/AUSTRALIA

Ryan -

Thank you very much for taking time to meet with the guys from Peabody Energy a few weeks ago. Really appreciated.

They recently saw a media mention that Administrator Pruitt is headed to Australia in early September for Minerals Week and is slated to attend a dinner at the Embassy in Canberra. Whereas Peabody has several mining facilities in Australia, they would like to extend an invitation to the Administrator to visit one of their mines.

Their Metropolitan Mine is just about an hour outside of Sydney and would be a great underground mine for the Administrator to visit. Assuming he will pass thru Sydney at some point in his travels to/from Canberra, please let me know if you would like to further discuss this possible visit.

Thanks as always for your time and consideration.

Thanks, Scott

Subject: Call from Kell

Rich,

Kell just called following up on my letter to the Administrator re meeting request. Appears the Administrator's scheduler had sent it to Kell for input. I provided some additional background on the PCI Group (number of PRPs, business subgroup), indicated that this was a trip you were organizing for representatives of the Business Subgroup as had not been to DC for a while (I said I thought it was over a year). That this was primarily an update meeting, laying the groundwork for achieving a more costeffective clean-up if the data supports that, and that were not requesting any specific actions from the Administrator at this time.

I also indicated that I thought you had been in touch with the Administrator's Chief of Staff on this request. I think this went to Kell just as part of the scheduling process. Kell seemed satisfied with the info I provided and stated he would respond to the scheduler with the information that she/he requested so that he is not holding up the process.

Let me know if I misspoke or need to correct/clarify anything.

Pic of new construction at the site (steel is coming up now)
Basics...
          Site is located in Ingleside, TX, which is about 18 miles from downtown Corpus Christi.
          Downtown Corpus Christi has the American Bank Center, which holds ~10,000 for concerts.
          Naval Air Station Corpus Christi can accommodate a 747
          $350-$375 million new investment
          65 new permanent jobs created by the investment
          Total employment at the site will be 335 after new investment completed
           400 contractors are working to construct the new investment
          New investment slated to be online and producing product in Sept. 2018
          Air-conditioned building could accommodate a dais and at least 200 people.
          Site leadership and plant personnel were/are pro-President Trump

Greg,

I've attached a picture of the construction area as it looks today. I think the best place to hold a meeting is in the white rectangular building behind the big crane. It could easily hold 200 people and has A/C.

I have been told that the Naval Air Station has a runway where a 747 can land.

The American Bank Center can seat 10,000 for a "Concert"

If you are not an existing client of H&K, do not construe anything in this e-mail to make you a client unless it contains a specific statement to that effect and do not disclose anything to H&K in reply that you expect it to hold in confidence. If you properly received this e-mail as a client, co-counsel or retained expert of H&K, you should maintain its contents in confidence in order to preserve the attorney-client or work product privilege that may be available to protect confidentiality.

Mark P. Vergnano President Chief Executive Officer

The Chemours Company 1007 Market Street Wilmington, DE 19899

July 12, 2018

The Honorable Andrew Wheeler Acting Administrator United States Environmental Protection Agency 1200 Pennsylvania Ave., N.W. Washington, D.C. 20460

Dear Administrator Wheeler:

On behalf of The Chemours Company ("Chemours"), please accept our congratulations and best wishes for success in your new role as Acting Administrator of the U.S. EPA.

Headquartered in Wilmington, Delaware, Chemours is a global leader in titanium technologies, fluoroproducts and chemical solutions, providing its customers with solutions in a wide range of industries with market-defining products, application expertise and chemistry-based innovations. Chemours ingredients are found in plastics and coatings, refrigeration and air conditioning, mining and general industrial manufacturing. Our flagship products include prominent brands such as Teflon™, Ti-Pure™, Krytox™, Viton™, Opteon™, Freon™ and Nafion™. Chemours has approximately 7,000 employees and 26 manufacturing sites serving approximately 4,000 customers in North America, Latin America, Asia-Pacific and Europe.

As a leading U.S.-based chemical company, Chemours is interested in the new vision that you will bring to EPA, in terms of both high-level policies and day-to-day management of the agency. Because of this interest, I would appreciate the opportunity to meet with you in your offices in Washington, D.C. to discuss three main topics: 1) fluorinated chemicals; 2) the Kigali Amendment to the Montreal Protocol, and 3) the CAFE standards review for model years 2022-2025.

We are particularly interested in learning more about your views on how EPA can deliver on its core mission of protecting human health and the environment and, at the same time, promote U.S. investment and job creation via responsible environmental policies and regulations. We expect there is significant alignment between Chemours and EPA regarding not only the goal of cleaner air and water but also how to achieve this goal. In that regard, we have specific ideas we would like to share about how we believe we can collaborate with your agency in the future on issues related to fluorinated chemicals.

The Honorable Andrew Wheeler Page 2 July 12, 2018

We also would like to share with you how Chemours is going to put American innovation to work to create global, market-leading product opportunities, which support new U.S. manufacturing investments and jobs. And since a sizeable portion of this new U.S. investment is premised upon EPA policy decisions (e.g., the Kigali Amendment to the Montreal Protocol and the CAFE standards review for model years 2022-2025), we would like to discuss how U.S. leadership in global markets can be maintained under your tenure at EPA.

We recognize how tight your schedule must be; nevertheless, below please find some dates in the near term that work for my calendar. Specifically, I can be in D.C. to meet with you on:

- Wednesday, July 25
- Thursday, July 26 in the morning
- Monday, August 6
- · Tuesday, August 7
- Monday, August 13 in the afternoon
- Tuesday, August 14 in the afternoon
- · Friday, August 17 in the morning.

We look forward to hearing back from you as to whether any of these dates work on your schedule.

More important, we look forward to a productive exchange of ideas and perspectives on issues that are important to the environment, the economy, and our respective organizations.

Mark P Vergnano

Sincerelly

CC: Mr. Ryan Jackson

Mr. Greg Smith

January 26, 2018

Dr. Jennifer Orme-Zavaleta
Environmental Protection Agency
Deputy Assistant Administrator for Science (Principal)
EPA Science Advisor
Office of Research and Development
Mail code: 8101R
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Dear Dr. Orme-Zavaleta:

Thank you for meeting with members of the American Chemistry Council's Formaldehyde Panel (the Panel) on January 24, 2018. The meeting provided the Panel with an opportunity to stress the importance of producing a revised formaldehyde IRIS assessment that fully implements and resolves scientifically the recommendations of the 2011 National Academy of Sciences (NAS) report. The Panel left the meeting very alarmed and troubled that the revised draft formaldehyde IRIS assessment will not utilize a mode of action framework as the organizing principle to assess hazard and dose response. Further, during the meeting Dr. Bahadori indicated that the revised draft IRIS assessment has not revisited the science but instead will be a restructuring of the draft. Notably the previous draft relied on studies that have been shown in recent years to have significant scientific and methodological issues^{2,3}. The Panel is unsure what is meant by "restructuring" but what was previously missing from the draft formaldehyde IRIS assessment was the consideration of mode of action in drawing conclusions. Given the significant amount of science generated for this chemical and the resources committed by the American taxpayers, a revised draft IRIS assessment must revisit all previous conclusions, demonstrate effective and science-based integration of all the lines of evidence and meet the standards of scientific integrity and transparency requested by the NAS and the public.

Additionally, during our meeting the Panel inquired about the regulatory drivers for an updated final formaldehyde IRIS assessment. EPA's Office of Air and Radiation (OAR) staff indicated that they had some activities for completion in 2018 that could be informed if a final revised IRIS assessment was available. EPA staff indicated that the revised draft formaldehyde IRIS assessment is unlikely to be finalized in 2018 due to the necessary and critical internal and external review required. Thus, a final IRIS assessment would not be available to inform the upcoming OAR activities. Given this information, the Panel was surprised to learn that OAR staff will consider the 1989 final IRIS assessment as best available science even though the

¹ National Academy of Sciences (NAS). National Research Council (NRC). 2011. Review of the Environmental Protection Agency's Draft IRIS Assessment of Formaldehyde. Committee to Review EPA's Draft IRIS Assessment of Formaldehyde. Board of Environmental Studies and Toxicology. Division of Earth and Life Sciences.

² Mundt, K., Gallagher, A., Dell, L., Natelson, E., Boffetta, P., and Gentry, R. Does occupational exposure to formaldehyde cause hematotoxicity and leukemia-specific chromosome changes in cultured myeloid progenitor cells? (2017) Critical Reviews in Toxicology. Aug;47(7):592-602.

³ Gentry, R., Rodricks, J., Turnbull, D., Bachand, A., Van Landingham, C., Shipp, A., Albertini, R., and Irons, R. (2013). Formaldehyde exposure and leukemia: Critical review and reevaluation of the results from a study that is the focus for evidence of biological plausibility.

Critical Reviews in Toxicology 43, no. 8: 661-670.

science of formaldehyde has vastly evolved over the last 29 years. The Clean Air Act requires reliance on the best available science and we strongly encourage OAR to use a more recently updated regulatory standard or develop its own formaldehyde risk value, for use in pending activities instead of relying on an outdated 1989 value. Notably, EPA has independently developed values for use in risk assessment related air activities in the past⁴.

The Panel has proactively supported cutting-edge research with leading scientists that directly addresses and informs the 2011 NAS recommendations, resulting in several dozen peer reviewed publications. The state of the science has evolved to the point where it is clear that using mode of action as the organizing framework is scientifically justified and necessary in drawing conclusions. The current assumption that any level of formaldehyde exposure results in some level of potential cancer risk, is inconsistent with the available recognized mode of action for this chemical. A "restructuring" of the 2010 draft assessment will not meet the EPA's scientific responsibility to make sound public policy decisions. As discussed during our meeting these new scientific studies demonstrate:

- 1. The biological implausibility of any relationship between formaldehyde inhalation and leukemia.
- 2. A threshold mode of action for any potential adverse health effects at the portal of entry.
- 3. The importance and utility of mode of action science for understanding potential impacts from inhalation exposure to formaldehyde.
- 4. The need for transparent integration of all streams of scientific evidence (epidemiology, toxicology and mode of action information) to draw scientifically defensible conclusions regarding human health risk.

The integration of mode of action evidence is a key element in an overall weight of the evidence assessment. Failure to account for this scientific evidence in revising a draft formaldehyde IRIS assessment would erroneously suggest that none of these available data inform understanding of cancer risks in the low concentration region, which is most important to understanding potential daily human exposures.

As stated in our meeting, a premature release of a draft assessment that has not followed the full IRIS review process or benefited from the sound scientific advice received during that process will cause irreparable harm to the companies represented by the Panel and to the many companies and jobs that depend on the broad use of the chemical; ACC estimates that approximately 963,000 jobs depend on the use of formaldehyde. The Panel urges you to ensure that the revised draft formaldehyde IRIS assessment can be held to the highest scientific standards. This involves fully implementing and resolving all the NAS recommendations; transparently identifying, evaluating, and integrating the available data using mode of action as the organizing framework; and recognizing that a threshold approach for portal of entry effects is supported by overwhelming evidence. I again reiterate, that the Panel is extremely concerned that a revised draft

⁴ April 29, 2004 EPA Office of Air Quality Planning & Standards tabulated dose-response values used in the risk assessment of hazardous air pollutants. In 2004, the Air Office indicated that it did not plan to use the 1987 dose-response value reported in IRIS as it no longer represented the best available science in the peer-reviewed literature. See April 2008 GAO Report titled "EPA's New Assessment Process Will Increase Challenges EPA Faces in Evaluating and Regulating Chemicals" for full details. Webpage: https://www.gao.gov/new.items/d08743t.pdf

January 26, 2018 Page 3

formaldehyde IRIS assessment that does not meet these benchmarks will also not meet NAS's original intentions in making its 2011 recommendations and fail to build public confidence in the scientific rigor and value of assessments produced by the IRIS program.

Sincerely,

Kimberly Wise White, Ph.D. American Chemistry Council (ACC) Senior Director, Chemical Products and Technology Division On Behalf of the ACC Formaldehyde Panel

Subject: RE: May 29 Importance: High

Deliberative Process / Ex. 5

Meeting Objectives:

Information Gathering - ask questions and get additional detail/background/information on the March EPA letter and thoughts on path forward

Information Sharing - educate EPA on the PCI allocation/post-allocation process and timing

Discuss Shared Objectives in the Post PDI Sampling Period

Discuss Process/Next Steps - put in place a process for coming up with how best to proceed post-Pre-RD sampling (PDI Work)

Status of the PDI Work and Issues Encountered Over The Past Few Weeks

Other Issues

Key Things to Consider/Discuss

Timing/Sequencing/Multiple Interrelated Work Flows

PDI Sampling and Evaluation Report - critical path to other items and therefore critical to that have cooperation and timely review during sampling and report phases

b. Remedy Design/Development – discussion of integration of PDI data and process path forward ensure

Allocation/Post-Allocation Process c.

d. RD/RA Negotiations and Consent Decree(s)

Early Action Projects

```
One versus multiple consent decrees

Hey Ryan,

Any chance this meeting will happen? One of our biggest issues — the Pesticide Registration Improvement Act — is timely because it expires at the end of the month and is in play in Farm Bill negotiations.

Sorry to bug you on this.

Ben

WASHINGTON (March 7, 2018) — Today, U.S. Environmental Protection Agency (EPA) is releasing a draft strategy to reduce the use of vertebrate animals in chemical testing for public comment. This fulfills another milestone the Agency has met under the Frank R. Lautenberg Chemical Safety for the 21st Century Act, which amended the Toxic Substances Control Act (TSCA).

"This draft strategy is a first step toward reducing the use of animals and increasing the use of cutting-edge science to ensure chemicals are reviewed for safety with the highest scientific standards," said EPA Administrator Scott Pruitt. "EPA is committed to working with animal welfare groups and other groups to produce a sound, effective plan in line with the law."

"We welcome the draft strategy as a progressive step to reduce and ultimately replace the use of animals to regulate chemicals in the U.S. through the implementation of TSCA reform," said Catherine Willett, director of science policy at The Humane Society of the United States. "We have every indication that EPA intends to make good on this unprecedented opportunity to not only reduce animal use, but improve the science used to evaluate chemical safety."

Under the Lautenberg Chemical Safety Act, EPA is required to develop a strategy to promote the development and implementation of alternative test methods and strategies to reduce, refine or replace vertebrate animal testing by June 22, 2018. The draft document incorporates input from a November 2017 public meeting held on the development of the draft strategy, as well as written comments submitted after the meeting, and draws upon EPA research on test methods.

The draft strategy follows the progress EPA has made finalizing three important rules and proposing a fees rule as outlined by the Lautenberg Chemical Safety Act. EPA is working diligently to implement the new law, the first major update to an environmental statute in 20 years, and get the most modern and safe chemicals to market quickly in order to provide regulatory certainty for manufacturers and confidence for American consumers.

This draft strategy will be available for comment for 45 days in docket EPA-HQ-OPPT-2017-0559. Comments received will be considered in the Agency's development of the final strategy.

A public meeting will be held on the draft strategy in Washington, DC on April 10, 2018.

Read the draft strategy and learn more about the April 10 public meeting: https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/alternative-test-methods-and-strategies-reduce

Background

On June 22, 2017 - the one-year anniversary of the Lautenberg Chemical Safety Act - EPA met milestones for <u>three framework TSCA rules</u>: the Prioritization Process Rule, the Risk Evaluation Process Rule, and the Inventory Rule.

The Prioritization Process Rule establishes a framework and criteria for identifying high-priority chemicals for EPA risk evaluations.

The Risk Evaluation Process Rule establishes a framework for evaluating high priority chemicals to determine whether or not they present an unreasonable risk to health and/or the environment. The rule ensures transparency and confidence in the risk evaluation process while retaining flexibility to allow for new scientific approaches as they are developed.

The Inventory Rule requires industry reporting of chemicals manufactured, imported, or processed in the U.S. over the past 10 years to identify which chemical substances on the TSCA Inventory are active in U.S. commerce. This will inform the chemicals EPA prioritizes for risk evaluations.

In addition to finalizing framework TSCA rules so the Agency can properly implement the law within the timeframes set by Congress, EPA has effectively addressed and eliminated the <u>backlog of new chemicals</u> awaiting EPA review. The current caseload is back at the baseline level.

EPA also proposed a <u>fees rule</u> on certain chemical manufacturers - including importers and processors - to provide a sustainable source of funding to defray resources that are available for implementation of new responsibilities under the amended law.

For more information on TSCA implementation, visit: https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/frank-r-lautenberg-chemical-safety-21st-century-act-5

Subject: [EXTERNAL] Bishop, Grijalva reach deal to permanently reauthorize LWCF

By Anthony Adragna

09/13/2018 10:21 AM EDT

The top Republican and Democrat on the House Natural Resources Committee have struck a <u>deal</u> to permanently reauthorize the Land and Water Conservation Fund, according to a senior aide.

Reps. <u>Rob Bishop</u> (R-Utah) and <u>Raúl Grijalva</u>'s (D-Ariz.) agreement, struck with support from Sen. <u>Richard Burr</u> (R-N.C.), would extend the life of the popular conservation program that expires Sept. 30 and could also pave the way for the Senate to more quickly pass a broad water infrastructure package, <u>S. 3021 (115)</u>. Burr has been holding that bill up in hopes of reaching a solution on LWCF.

"My reservations about the program have never been about the goals of LWCF, rather, I've been frustrated that the implementation of the program fell short of the law's intended purpose," Bishop said in a statement. "This bill, along with additional action we took today, ensures that Congress adequately funds the lands it already owns and realigns the fund back to its original goal."

Among other provisions, the deal ensures that at least 40 percent of the fund goes toward state programs and another 40 percent at least goes toward federal ones.

The committee plans to mark up the agreement at a markup at 10:45 a.m.

Ryan -

Thank you very much for taking time to meet with the guys from Peabody Energy a few weeks ago. Really appreciated.

They recently saw a media mention that Administrator Pruitt is headed to Australia in early September for Minerals Week and is slated to attend a dinner at the Embassy in Canberra. Whereas Peabody has several mining facilities in Australia, they would like to extend an invitation to the Administrator to visit one of their mines.

Their Metropolitan Mine is just about an hour outside of Sydney and would be a great underground mine for the Administrator to visit. Assuming he will pass thru Sydney at some point in his travels to/from Canberra, please let me know if you would like to further discuss this possible visit.

Thanks as always for your time and consideration.

Thanks, Scott

EPA Meets Another TSCA Milestone, Releases Draft Strategy to Reduce Animal Testing

WASHINGTON (March 7, 2018) — Today, U.S. Environmental Protection Agency (EPA) is releasing a draft strategy to reduce the use of vertebrate animals in chemical testing for public comment. This fulfills another milestone the Agency has met under the Frank R. Lautenberg Chemical Safety for the 21st Century Act, which amended the Toxic Substances Control Act (TSCA).

"This draft strategy is a first step toward reducing the use of animals and increasing the use of cutting-edge science to ensure chemicals are reviewed for safety with the highest scientific standards," said EPA Administrator Scott Pruitt. "EPA is committed to working with animal welfare groups and other groups to produce a sound, effective plan in line with the law."

"We welcome the draft strategy as a progressive step to reduce and ultimately replace the use of animals to regulate chemicals in the U.S. through the implementation of TSCA reform," said Catherine Willett, director of science policy at The Humane Society of the United States. "We have every indication that EPA intends to make good on this unprecedented opportunity to not only reduce animal use, but improve the science used to evaluate chemical safety."

Under the Lautenberg Chemical Safety Act, EPA is required to develop a strategy to promote the development and implementation of alternative test methods and strategies to reduce, refine or replace vertebrate animal testing by June 22, 2018. The draft document incorporates input from a November 2017 public meeting held on the development of the draft strategy, as well as written comments submitted after the meeting, and draws upon EPA research on test methods.

The draft strategy follows the progress EPA has made finalizing three important rules and proposing a fees rule as outlined by the Lautenberg Chemical Safety Act. EPA is working diligently to implement the new law, the first major update to an environmental statute in 20 years, and get the most modern and safe chemicals to market quickly in order to provide regulatory certainty for manufacturers and confidence for American consumers.

This draft strategy will be available for comment for 45 days in docket EPA-HQ-OPPT-2017-0559. Comments received will be considered in the Agency's development of the final strategy.

A public meeting will be held on the draft strategy in Washington, DC on April 10, 2018.

Read the draft strategy and learn more about the April 10 public meeting:

Subject: Meeting request on ozone

Hi. I hope y'all are doing well! I represent the San Bernardino County Transportation Authority and they would like to meet with you on September 25 or 26 to discuss ways they can work with the EPA on ozone. They are grounds zero for goods movement. Do you have any time to meet the executive director and board director?

Thank you! Lauri

Ryan -

Many thanks for taking time to meet with me, Ray and Michael last week re: Peabody, the Paris deal, etc. Their CEO, Glenn Kellow, is going to be in DC on June 5th and would like to meet with Administrator Pruitt. Is that a possibility? We are also trying to meet with Secretary Zinke, as well.

Really appreciated; please let me know.

Thanks, Scott

Subject: You're Invited – Holland & Knight's Annual Rooftop Party: Not Your Typical Amusement Park

Please pass along to Susan and anyone else I may have missed. Daisy feel free to share with Stephen and Mandy share with Alex please. Hope you all can (and are allowed) to come!

The Capital isn't your typical amusement park. Set at the intersection of the near future and the reimagined past. Intended for those with an agenda.

Holland & Knight invites you to explore a futuristic "Wild Wild West Wing" - a world of mystery, action and thrills looked after by what some may call "robotic" hosts. Come celebrate a summer afternoon with us ... with a twist. The park's guests will have their palettes indulged, from simple finger foods and savory hors d'oeuvres to handcrafted cocktails and beer.

Come join us for this epic takeover of the chaotic Capital.

Date/Time: Thursday, June 21, 2018

5:30 - 9:00 p.m.

Where: Holland & Knight

800 17th Street N.W.

Suite 1100

Washington, DC 20006

Please Note: Holland & Knight has consulted with the

House and Senate Ethics Committees regarding this event's compliance with applicable House and Senate rules.

This invitation is nontransferable.

RSVP

Space is limited. Please RSVP to Sarah Caramanica by June 19.

Subject: The Chemours Company - Letter to POTUS Re: SNAP Appeal

Attachments: Chemours CEO Letter to President Donald J. Trump - SNAP Appeal (Sep. 9, 2017).pdf

Ryan,

Busy times, but I hope this note finds you well.

Attached please find a letter that Mark Vergnano, Chemours' CEO, directed to President Trump earlier today related to our company's strong interest in seeing EPA pursue an en banc appeal to the DC Circuit Court of Appeals related to the SNAP issue.

We trust by now you understand our position on this matter, and how critical preserving the SNAP program is to our company, both today and into the future.

As for Administrator Pruitt, please know that Mr. Vergnano would appreciate the opportunity to speak briefly with him this afternoon/ASAP to reemphasize the importance of this issue to Chemours. The call would not take more than 15 minutes.

Please let me know if we can arrange such a call and, if so, I will be on point to get Mr. Vergnano on the line with Administrator Pruitt.

I realize the call request comes on short notice, but I trust you will understand that I cannot overemphasize the interest Chemours has on this matter.

Many thanks, Ryan.

The Chemours Company 1007 Market Street Wilmington, DE 19899

September 7, 2017

President Donald J. Trump The White House 1600 Pennsylvania Avenue NW Washington, DC 20500

Dear Mr. President:

I am writing to request your urgent support to prevent a significant setback to American innovation, job creation and economic growth. Recently, the United States Court of Appeals for the District of Columbia Circuit issued a decision against the U.S. Environmental Protection Agency that will negatively impact recent Significant New Alternatives Policy (SNAP) efforts, a pro-business program that was instituted by Congress under President George H.W. Bush that builds upon principles of conservative environmental stewardship by incentivizing private sector innovation to find safer, next-generation chemical substitutes.

Supported by the business certainty created by the SNAP program, Honeywell and Chemours have invested well over \$1 billion in the development and manufacture of hydrofluoro-olefins (HFOs) to meet domestic and global demand. In fact, we are currently investing hundreds of millions of dollars in our new facility in Corpus Christi. This investment supports thousands of U.S.-based jobs supporting local economies, including manufacturing plants in Louisiana and Texas. These 21st century American solutions replace outdated hydrofluorocarbons (HFCs), and are being adopted worldwide for use in products such as refrigerators, commercial and residential air conditioners, foam insulation and automobiles. The U.S. HFO manufacturing plants are producing not only for the United States, but are also exporting HFO products to meet rising global demand. This demand is expected to continue to increase as developing countries begin to also transition to the most current solutions. Global adoption of HFOs is well underway, providing the United States with a marketplace advantage that will benefit American workers and the economy.

The entire industry worked closely with the EPA on the recent SNAP efforts and have already invested in replacement solutions. The business uncertainty created by this ruling has a huge impact on more than just the producers of the alternatives.

Foreign competitors Mexichem Fluor and Arkema, who have not invested in the R&D to create these alternatives and who do not manufacture these alternatives, used the U.S. courts to hurt American companies. In the end, they will benefit along with the Chinese since HFCs produced from fluorospar in China dominate the global market in HFC production. In fact, Chinese imports of HFCs have been the subject of numerous U.S. industry antidumping complaints.

If this ruling stands, it will likely create a chilling effect on American businesses which won't risk making the necessary investments in both workers and technology. American companies lead the world in innovation and this ruling, instigated by two foreign competitors, undermines that fundamental tenet. Without action by the Administration, this damaging court ruling will impact U.S. industry and innovation and create significant business uncertainty that will hinder job growth and additional investments.

We urge you to support an EPA en banc appeal to the DC Circuit Court of Appeals.

Mark P. Vergnano

Subject: RE: FYI

Additional info from one of the companies:

For further clarification, there was unanimous agreement among the 3 judges on the panel that EPA was neither arbitrary nor capricious in their use of GWP in their comparative analysis. This means EPA can and, I suppose, must continue to use GWP as a reason to remove products from the approved list of replacements for ODSs, but they cannot impact replacements of HFCs. That is what has created the perverse outcomes below.

There are many, many grocery stores, plant sites, and commercial buildings that are using ODSs still that will continue to be regulated and not allowed to use the high GWP replacements specifically because they use equipment using ODSs. Their equipment is assembled on site and the refrigerant is installed there. Their competitors using HFCs will be able to use anything that they want to use including unsafe quantities of explosive fluids like propane and ammonia (Chinese companies are ready to import immediately and SNAP is the only thing keeping them out). The regulatory burden has been moved to a location by location management and away from OEMs and chemical companies.

We are not asking EPA to appeal GHG portion of this decision. We are asking EPA to appeal because of the issues that have been inadvertently created likely due to a general lack of understanding about how the SNAP program works. This is why the OEMs (Carrier, IR, Daikin, Danfoss etc.) are weighing in. This creates a mess for them.

Subject: Mark Vergnano Letters to President Trump and EPA Administrator Scott Pruitt

Ryan,

Wanted to make sure you had copies of both these letters.

Happy Friday!

Mark P. Vergnano President Chief Executive Officer

The Chemours Company 1007 Market Street Wilmington, DE 19899

May 30, 2017

The Honorable Scott Pruitt Administrator United States Environmental Protection Agency 1200 Pennsylvania Ave., N.W. Washington, D.C. 20460

Dear Administrator Pruitt:

I write to thank you for our recent meeting in Washington, D.C.

We appreciated the opportunity to hear you describe your vision for leading the Environmental Protection Agency. As we discussed during the meeting, you represent a new type of leader at EPA; namely, a professional who understands that the agency can deliver on its core mission of protecting human health and the environment and, at the same time, promote U.S. investment and job creation via responsible and consistent environmental policies and regulations. Chemours believes the EPA can do both; indeed, we believe the agency should do both, and we welcome the opportunities that such a rational approach will create for the U.S. economy.

We also appreciated the chance to provide you with more information about Chemours. With approximately 7,000 employees, (5,000 of whom are located in the United States) and 26 manufacturing sites, which serve approximately 4,000 customers in North America, Latin America, Asia-Pacific and Europe, we are committed to putting American innovation to work to create global, market-leading product opportunities, and, in the process, support new manufacturing investments and new jobs in the United States.

Please know that our discussions with you about how your staff is going about the process of implementing key changes to the Toxic Substances Control Act, required by the 2016 Lautenberg Chemical Safety Act, produced immediate and substantive results. Since our meeting, significant progress has been made to address our concerns about EPA's implementation of the changes to Section 5 – the new chemicals program – and we believe the backlog for new product approvals that existed when you took office is on the way to being addressed. We appreciate your leadership on this important issue.

Directly related to one of the many market sectors we are involved in, we also shared with you that we have previously invested hundreds of millions of dollars in the development of new generation refrigerants, such as hydrofluoroolefins (HFOs). These refrigerants provide automobile manufacturers with a low-cost alternative to meeting light-duty vehicle standards that are already being implemented in the United States. Importantly, Chemours is also making investments that will create additional American manufacturing and commercial jobs.

The Honorable Scott Pruitt May 30, 2017 Page 2

Of note, you will recall we talked about an ongoing \$300 million manufacturing investment that will result in the construction of a new HFO production facility at our Corpus Christi plant site in Ingleside, TX.

Please consider this letter a personal invitation for Chemours to host you and your senior staff this fall at the Corpus Christi plant. We would value the opportunity to provide you and your invitees with a tour of the facility, including the new expansion project, and to talk in more detail about our new products and the global markets that will be served from this plant.

We also would value the opportunity to continue dialogue with you about how your leadership at EPA can pave the way for new investment and job creation by the entire U.S. chemical industry.

We trust you will favorably view this invitation to tour our Corpus Christi plant later this year, and we will follow up directly with your senior staff to select a date for same.

Sincerely

Mark P. Vergnano

Hey Ryan,

Congrats on getting through the hearing etc. From the outside, it looks like things are going well.

Any thoughts on getting on the Acting Administrator's schedule with folks from the Household and Commercial Products Association?

Maybe later in August or early September?

RJ.

You sticking around? I heard a rumor you were but didn't know if it was official.

If so, do you think I could bring in some folks from the Household and Commercial Products Association to introduce themselves to Wheeler? HCPA was formerly known as the Consumer Specialty Products Association. They represent companies like Procter & Gamble, SC Johnson, Clorox, the makers of Lysol, and institutional cleaning products like Ecolab.

Our request isn't urgent – it's just to introduce the industry and their priorities – but we'd love to get something on the books. We could even meet in August if he's around then. Happy to work with the scheduler, but I wasn't sure who that was.

Hope you're well. See you soon.

Subject: Re: Meeting Request for January 8-11

Thank you, Crystal.

We appreciate that follow-up. However, with Adm. Pruitt being unavailable, could we get on AA Ross' schedule? We know Lee, and actually just met with him a few weeks ago.

Thank you,

Dain M. Hansen

SOMETHING NICE TO SAY: Oregon Gov. Kate Brown visited the offices of media company Willamette Week, where she offered kind words for Pruitt's Superfund efforts, when asked where she agreed with the Trump administration. "The one thing that I am actually pleased that we are working together on is with the administrator of the EPA, and that is cleaning up the Portland Harbor," she said. "He's absolutely committed to making this happen, as am I. It's a job creator." Read more.

Attachments: REASONS TO SEEK REHEARING OF THE HFC CASE.PDF

REASONS TO SEEK REHEARING OF THE HFC CASE

Industry perspective:

- The majority of industry affected by the HFC rule support maintaining the rule for reasons of regulatory certainty, to preserve national uniformity, and to discourage state action.
- American firms have invested heavily in the transition to HFC alternatives. No equipment manufacturer challenged the rule.
- The timelines in the EPA rule are, in the main, workable for industry. EPA staff have indicated willingness to discuss adjustments for particular uses where the case is made.
- The EPA rule operates as a <u>practical</u> preemption. The Clean Air Act does not preempt any state from adopting its own use-by-use HFC regulations. No state has done so yet, but without the EPA rule California, New York, and possibly a dozen other states are likely to enter the field, creating a difficult patchwork for industry.
- Industry supports the Kigali HFC amendment to the Montreal Protocol because it assures that the global
 industry addresses this problem. The EPA rule preserves the administration's options with respect to
 that agreement. The reductions from this rule would meet U.S. obligations into the early 2020s, meaning
 no further EPA rulemaking or new legislation would be needed in this term.

Legal arguments supporting rehearing:

- The 2-1 panel decision reverses an EPA rule that this administration defended at oral argument in February. The HFC rule is not included in those that the president or the EPA administrator has proposed to review or revise.
- There are strong legal reasons to seek rehearing by the full D.C. Circuit. The panel majority is on extremely weak ground asserting that the Clean Air Act prevents EPA from regulating HFCs.
- Section 612 of the statute says: "To the maximum practicable extent, [ozone-depleting substances] shall be replaced by chemicals, product substitutes, or alternative manufacturing processes that reduce overall risks to human health and the environment."
- "Overall risk to human health and environment" is a deliberately broad phrase that includes risks from toxicity, flammability, or environmental effects, and that allows EPA to balance among risks for the greatest overall benefit.
- The statute also directs EPA to list (A) substitutes <u>prohibited</u> for specific uses and (B) substitutes <u>acceptable</u> for specific uses. The statute provides a petition process to keep the lists up-to-date.
- In 2015, EPA moved HFCs from the acceptable list to the prohibited list for specific uses where industry has developed lower-risk alternatives. These alternatives have substantially less, and in many cases virtually zero, greenhouse gas potential.

- The court ruling is contradictory. The panel majority <u>approved</u> of EPA's adding HFCs to the prohibited list because of their greenhouse gases potential. But the majority also says EPA <u>can't make any equipment</u> <u>maker stop using HFCs.</u>
- The majority did so by declaring that "replace" can only mean the <u>one-time replacement</u> of A with B.
 Under this reading, EPA's authority ended when an equipment maker switched from ozone-depleting substances to a non-ozone-depleting substitute.
- The majority interpreted several dictionary definitions as supporting the <u>one-time-only</u> approach. But
 the dissenting judge pointed to other dictionary definitions that define "replace" as a <u>continuing process</u>
 the replacement of A with B, followed by the replacement of B with C, and so on.
 - Think "sugar substitutes" saccharin replaced sugar, and later aspartame replaced saccharin.
 Both are "sugar substitutes."
 - Think "substitute teachers" when a teacher goes on maternity leave, the student may have a succession of substitute teachers. Each substitutes for the one before, but also for the original teacher.
- The dissent persuasively shows that Congress very likely intended to cover the <u>continuing process</u> of replacement in order to lower overall risk "to the maximum practicable extent" and to promote continuing industry investment and innovation in alternatives.
- At the very least, the dissent shows that "replace" is <u>ambiguous</u>. And since both approaches are reasonable interpretations, the court should have left EPA the leeway to choose between them.

Broader Consequences:

- As explained above, the EPA rules are workable for industry. But the consequence of taking away EPA's (and other agencies') leeway in future cases could be large.
- The decision could significantly hamper this administration's ability to accomplish its priority regulatory and deregulatory objectives.
- In this instance, a conservative panel moved aggressively to block a rule from the prior administration. If allowed to stand, however, the precedent will be used aggressively by liberal judges to block Trump administration rules.
- This could affect the outcome of litigation over revisions or repeals of the Clean Power Plan and the Waters of the United States rule, to give just two examples.

Bottom line:

- The administration should seek rehearing of this case because it would:
 - o Meet the reliance, certainty, and uniformity interests of industry.
 - Reduce real health and environmental risks while giving industry a predictable framework for investment, innovation, and job creation.
 - Preserve the administration's leeway to achieve its priorities.

Please note, the Environmental Protection Agency has closed off access to incoming vehicles at the parking garage at 800 17th Street due to clean-up of a grease spill in the alley. At this time, the clean-up team is asking vehicles to refrain from exiting the garage unless it is absolutely necessary. Access will remain restricted for all vehicles for the next several hours. Colonial Parking will accept **monthly account holders** at their location at 1775 I Street, between 17th and 18th. Mention 800 17th Street upon arrival. Please contact me if you have any questions or concerns. I will notify everyone when the restriction has been lifted.

Subject: introductions

Gentlemen, I would like to make some introductions.

Rich and Dimitri represent the group which the Administrator met with called AROW and Roger is now with General Electric. All these entities have a lot of experience from the PRP side and from the brownfields revitalization side of land clean up and redevelopment.

As we are developing our team within headquarters of career and policy staff to work on the superfund initiatives to get clean ups done in a targeted and quicker manner, convening an outside advisory group of stakeholders from industry and ultimately from other stakeholders and NGOs will be helpful to get broader support and technical expertise.

This introduction is the first step on that to meet jointly, separately, or both to initiate those discussions.

Thanks

Ryan.

Subject: Meeting request- ACC

Ryan,

I hope all is well. Wanted to see if it was at all possible to come in and meet with you and the Administrator next week. Was hoping that we could meet next Tuesday, the 24th sometime between 9:30am and 11am?

I'd like to bring in our CEO to discuss general regulatory issues. Let me know if you need anything else.

Thank you, Bryan

Subject: Meetings with Mark Vergnano, CEO of Chemours

Hey Ryan, Mark Vergnano, the CEO of Chemours, would like to meet with Dave Ross regarding efforts Chemours is undertaking on PFAS and its interest in working with EPA, as well as with Bill Wehrum with regard to the Kigali Amendment to the Montreal Protocol and the Administration's upcoming proposed rule on CAFE standards.

Mark can be in Washington on the following dates. We were wondering if setting up both meetings on the same day would be possible:

Wednesday, July 25th
Thursday, July 26th in the morning
Monday, August 6th
Tuesday, August 7th
Monday, August 13th in the afternoon
Tuesday, August 14th in the afternoon
Friday, August 17th in the morning,

Appreciate your consideration.

Ryan -

Hope you're well. Know it's been a while, but after connecting with Catz, he recommended that I reach out to you about having Pruitt speak at Shale Insight (President Trump spoke at the conference last year) next month in Pittsburgh. More here: http://shaleinsight.com/

I understand the MSC has reached out to your scheduling folks (see attached), but has not received word on Pruitt's potential availability. We can absolutely be helpful in filling up a day or two with field events as well.

Thanks for giving this a look. Hope it works out and that you make the trip too.

Peer Review

The draft research report on the study of formaldehyde exposure to T53 haploinsufficient mice was evaluated by the reviewers listed below. These reviewers served as independent scientists, not as representatives of any institution, company, or governmental agency. In this capacity, reviewers determined if the design and conditions of these NTP studies was appropriate and ensured that this NTP Research Report presented the experimental results and conclusions fully and clearly.

Facility under contract to Alion Science and Technology, Inc. The authors thank Dr. Grace Kissling for statistical analysis and Drs. Michelle Hooth and Gordon Flake for critical review of this manuscript.

Abstract

Formaldehyde inhalation is linked to nasal cancer and leukemia in humans. Formaldehydeinduced DNA-protein crosslinks and enhanced cell proliferation are important in the pathogenesis of nasal cancer and, potentially, leukemia. Mutations in the tumor suppressor gene Trp53 have been associated with formaldehyde-induced nasal tumors and might be a key mechanistic event in formaldehyde-induced leukemia. The objective of this study was to evaluate the potential role of the Trp53 gene in formaldehyde-induced nasal carcinogenicity, leukemia or lymphohematopoietic cancer, and potentially other neoplasms in genetically susceptible mice. Male, Trp53 haploinsufficient (Trp53[±]) mouse strains (B6.129-*Trp53*^{tm1Brd} and C3B6.129F1-Trp53^{tm1Brd}) were exposed to 0-, 7.5- or 15-ppm formaldehyde (25/group) 6 h/d, 5 d/wk for 8 wk, and then held for 32 wk. Blood was collected for hematology, and major tissues and gross lesions were collected for histopathology. The primary formaldehyde-related finding was squamous metaplasia of the respiratory epithelium of the nose. Inhalation of a maximum tolerated dose of formaldehyde caused significant injury to the nasal mucosa and cell proliferation, but did not cause nasal tumors or an increased prevalence of leukemia or lymphohematopoietic cancer in Trp53[±] mice. All observed neoplasms were considered background lesions for these mouse strains. The results of this short-term carcinogenicity study do not support a role for Trp53 in formaldehyde-induced neoplasia.

Key Words: Formaldehyde, Trp53 mutations, Trp53[±] mice, nasal cavity, neoplasia, inhalation

Introduction

Formaldehyde is recognized as a nasal carcinogen in humans ¹ and laboratory rats ²⁻⁴. Exposure of rats to formaldehyde results in development of squamous cell carcinoma (SCC) in the anterior and posterior lateral meatus of the nasal cavity ². DNA-protein crosslinks (DPC) and cell proliferation are prominent at sites of SCC formation in the rat nasal cavity ⁴⁻⁶, suggesting that incomplete repair of DPC results in mutations within the proliferating cell population and might lead to neoplasia. Considerable evidence shows that formaldehyde-induced mutations in the tumor suppressor gene *Trp53* are important in the pathogenesis of nasal cancer ^{7; 8}. Mutations in *Trp53* were identified in formaldehyde-induced nasal SCC in rats ⁹, and abnormal Trp53 protein was shown to accumulate in the nasal tissue of formaldehyde-exposed rats ¹⁰. Mutations in *Trp53* result in loss of tumor suppression functions including RNA repair, cell cycle arrest, senescence, and apoptosis ¹¹, resulting in a loss of normal growth control and clonal expansion of mutated cells ¹²⁻¹⁴.

Formaldehyde also has been reported to cause myeloid leukemia in humans¹⁵, although the mechanism is unknown. Mutations in the Trp53 gene could be important in the pathogenesis of leukemia or lymphohematopoietic cancer. Zhang et al. ¹⁶ proposed that hematopoietic stem cells in the nasal epithelium or in circulation undergo formaldehyde-induced mutations that result in loss of *Trp53* and acquisition of the capacity for self-renewal. The *Trp53* gene is involved in regulating the self-renewal of hematopoietic stem cells ¹⁷⁻²⁰. In addition, disruption of the *Trp53* pathway has been shown to enhance production of induced pluripotent stem cells capable of self-renewal ²¹. Acquisition of self-renewal capacity is one of the initial steps in cancer development ²². Formaldehyde-induced loss of *Trp53* would be rare, however, and indeed an increased incidence of lymphohematopoietic cancer has not been observed in formaldehyde-exposed wild type rats and mice ³.

Currently no good animal model is available for investigating the mechanism(s) by which formaldehyde causes leukemia. Because considerable evidence suggests a role of *Trp53* in formaldehyde-induced nasal SCC, we evaluated two *Trp53*-haploinsufficient (Trp53[±]) mouse strains in this study. We hypothesized that formaldehyde-induced loss of Trp53 would be increased in Trp53[±] mice, resulting in an increased incidence of SCC of the nose and leukemia or lymphohematopoietic cancer, and potentially neoplasms at other sites.

Materials and Methods

Animals

Two mouse strains heterozygous for the null and wildtype *Trp53* allele were used to evaluate the potential role of Trp53 in formaldehyde-induced lymphohematopoietic cancer. The inbred B6.129-*Trp53*^{tm1Brd} (Model P53N12-M) mouse strain was selected for this study because of its previous use as a model for lymphohematopoietic tumors in short-term cancer bioassays ²³⁻²⁹. The C3B6.129F1-*Trp53*^{tm1Brd} strain also was selected based on the observation of chemical exposure-dependent lymphohematopoietic tumors of either lymphoid- or myeloid- committed stem cell origin ^{30; 31}. This strain is an outcross between C3H/HeNTac female (Model C3H-F) x B6.129-*Trp53*^{tm1Brd} (Model P53N12-M) homozygous Trp53 null allele male to produce the haploinsufficient F1 progeny. Heterozygotes were selected because they have a lower background incidence of sporadic tumors than the homozygotes, and the latency for sporadically

occurring tumors is longer than in the homozygote ^{32, 33}. Although rats appear to be more susceptible than mice to formaldehyde-induced SCC of the nose, a genetically modified rat strain was not available at the time of this study.

Male C3B6.129F1-*Trp53*^{tm1Brd} mice were 9 weeks old on arrival and male B6.129-*Trp53*^{tm1Brd} haploinsufficient mice (Taconic, Hudson, NY) were 8–10 weeks old on arrival. After a 3-(B6.129-*Trp53*^{tm1Brd}) to 4-week (C3B6.129F1-*Trp53*^{tm1Brd}) quarantine period, mice were weighed and randomly assigned to three exposure groups (Table 1). Five mice per strain were assigned to sentinel groups. All mice were acclimated to the Hazleton 2000 exposure chambers for 3 days prior to exposure. Food (NIH-31) was removed during the 6-hour exposure periods; and water was always available. Body weights were recorded weekly.

Formaldehyde Generation and Monitoring

Nominal chamber concentrations of 7.5-ppm and 15-ppm formaldehyde vapor were generated by heating paraformaldehyde. These concentrations were selected based on reports in the literature and on the results of a 2-week range-finding study in mice. Because cell proliferation plays a key role in formaldehyde-induced neoplasia, exposure concentrations were selected that caused significant injury and cell regeneration in the nasal cavity in the range-finding study. Two 1-liter Woulff bottles containing 200 grams of prilled paraformaldehyde (Sigma Aldrich, St. Louis, MO) were heated on hot plates to 95°C (7.5 ppm) and 120°C (15 ppm). A constant volume (1 liter per minute [LPM]) of breathing-quality air (dried, filtered, and carbon-scrubbed) was delivered to the Woulff bottles. A metered volume of the formaldehyde-enriched headspace was mixed with the chamber supply air stream (500-LPM humidified, filtered, and carbon-scrubbed air). The Hazleton 2000 exposure chamber concentrations were monitored using a Model Z-300XP Formaldehyde Meter (Environmental Sensors, Boca Raton, FL).

Animal Exposure

Mice were individually housed in Hazleton 2000 chambers and exposed to either conditioned air (charcoal and HEPA filtered, temperature and humidity controlled), or to 7.5- or 15-ppm formaldehyde in conditioned air 6 hours/day, 5 days/week, for 8 weeks. This treatment regimen represents a standard 5-day workweek, used for studying chemicals for which exposure is primarily occupational. Exposures of the two strains were staggered by 1 week because of the large numbers of mice to be necropsied. The exposure of the B6.129-*Trp53*^{tm1Brd} mice began 1 week after beginning the exposure of C3B6.129F1-*Trp53*^{tm1Brd} mice. Following the 8-week inhalation exposures, mice were transferred to individual polycarbonate cages and monitored for ~32 weeks (until 51–53 weeks of age). Mice were weighed and examined for gross lesions weekly. Mice with large or ulcerated tumors were euthanized and a necropsy conducted.

Hematology

On the day of the scheduled necropsy, whole blood samples were collected under isoflurane anesthesia by means of the retro-orbital venous sinus into tubes containing K₂EDTA as anticoagulant. The whole blood was analyzed for a complete blood count (CBC) evaluation. CBC end points, including absolute leukocyte (total and differential), erythrocyte (red blood cell [RBC]), reticulocyte (% and absolute [Retics]) and platelet (Plat) counts, hemoglobin (HgB) concentrations and hematocrit (Hct), mean corpuscular volume (MCV), mean corpuscular hemoglobin (MCH), mean corpuscular hemoglobin concentration (MCHC) values, were

obtained using the ProCyte Dx hematology analyzer (IDEXX Laboratories, Westbrook, ME). A packed cell volume (spun hematocrit) was performed using an Autocrit Ultra 3 micro-hematocrit centrifuge (Becton, Dickinson and Company, Franklin Lakes, NJ). Microscopic evaluation of Romanowsky-stained blood smears was performed to assess leukocyte differential distribution percentages and RBC, WBC, and Plt morphology.

Necropsy

Mice found moribund during the study and those that survived to the end of the study were euthanized by CO₂ asphyxiation and exsanguination. At necropsy, major organs were weighed and the following tissues, including gross lesions, were collected for pathology evaluations. The distal 1–2 cm of the left femur was sectioned through the frontal plane to include the articular cartilage and articular surface, the femoral condyles with epiphyseal plate, and diaphysis with bone marrow. The left femur was fixed in 10% neutral-buffered formalin (NBF). The nasal cavities were fixed by retrograde infusion of NBF, and then immersed in NBF. The formalinfixed nasal cavities were decalcified (RDO Rapid Decalcifier; Apex Engineering Products, Aurora, IL) for 12 hours. After decalcification, three separate sections of the nasal cavity were taken at (1) the level of the incisor teeth (Level 1), (2) midway between incisors and first molar (Level 2), and (3) middle of second molar (olfactory region) (Level 3). The remainder of the nasal cavity and turbinates were carefully examined for gross lesions. One-half of the trachea was left attached to the lung. After weighing the lung, the trachea was used to inflate the lungs with fixative. The lungs were trimmed to allow the largest cross-section surface area possible. A transverse section of the larvnx was taken at the base of the epiglottis just anterior to the laryngeal saccule. Two sections of liver including transverse sections through the left and median lobes were taken midway along the greatest dimension. A section of gallbladder was included in the section of median lobe. A mid-longitudinal section (left kidney) and a cross section (right kidney) through the entire cortex, pelvis, and medulla of each kidney were collected. Mesenteric, mandibular, mediastinal, and bronchial lymph nodes were collected and placed in cassettes. After formalin fixation, tissues were trimmed and processed, embedded in paraffin wax, sectioned at 5 µm, and stained with hematoxylin and eosin (H&E). A pathologist evaluated the slides, and then the tumor slides were reviewed by four additional pathologists during a Pathology Peer Review.

Immunohistochemistry Staining

Immunohistochemistry was used to better characterize sarcomas. Formalin-fixed, paraffin-embedded tissue sections were deparaffinized in xylene and rehydrated through graded alcohols. Heat-induced antigen retrieval in citrate buffer (pH 6.0, Biocare Medical, Concord, CA) was done in a Decloaker® pressure chamber for 5 minutes at 110°C, followed by 3% hydrogen peroxide for 15 minutes to quench endogenous peroxidase activity. Nonspecific sites were blocked by incubating slides for 20 minutes with 2.5% normal horse serum (Vector, Burlingame, CA). The sections then were then incubated with rabbit monoclonal antimyogenin antibody (Cat# ab124800, Lot# GR155521-1, Abcam, Cambridge, MA) at 1:500 dilution, or a rabbit monoclonal anti-vimentin antibody (Cat# ab92547, lot# GR145336-12, Abcam) at 1:1000 dilution for 1 hour at room temperature. For negative control tissue sections, normal rabbit IgG (Calbiochem®, San Diego, CA), diluted to match the protein concentration of the myogenin or vimentin antibodies was utilized. The antigen-antibody complex was detected using ImmPRESS HRP anti-rabbit IgG (Vector) and 3,3-diaminobenzidine (Dako, Carpinteria, CA). Slides were

then counterstained with hematoxylin, dehydrated, and cover-slipped. The myogenin slides were stained manually, whereas, the vimentin slides were stained via a Biocare IntellipathTM FLX autostainer (Biocare Medical).

Statistical Analyses

Cochran-Armitage trend tests were used to test for dose-related trends in incidences of neoplasms. Fisher's exact tests (one-sided) were used to compare incidences of neoplasms between each dose group and the control group. Hematology data were analyzed using nonparametric multiple comparison methods ^{34; 35}.

Results

Survival

Nine C3B6F1.129-*Trp53*^{tm1Brd} animals died prior to the scheduled sacrifice (Table 1). Sixty-five animals of this strain survived to study termination. Sixteen B6.129-*Trp53*^{tm1Brd} animals died prior to the time of scheduled sacrifice (Table 1). Most of these animals were euthanized early due to the presence of large, grossly visible tumors. Seventy-five B6.129-*Trp53*^{tm1Brd} animals survived to study termination.

Body and Organ Weights

Body weights of C3B6F1.129-*Trp53*^{tm1Brd} mice exposed to 7.5-ppm formaldehyde were significantly less than controls (p<0.05) from week 1 to week 11, and at weeks 37 and 38. Body weights of mice exposed to 15-ppm formaldehyde were significantly less than controls (p<0.05) from week 1 to week 24, and at weeks 37 and 38 (Figure 1). Absolute and relative liver weights were significantly decreased 11% and 8%, respectively, in mice exposed to 15-ppm formaldehyde. Lung, kidney, spleen, and thymus weights of formaldehyde-exposed mice were not significantly different from controls (data not shown).

Body weights of B6.129-*Trp53*^{tm1Brd} mice exposed to formaldehyde were not significantly different from controls at any time point (Figure 1). Absolute and relative liver, lung, kidney, spleen, and thymus weights of formaldehyde-exposed B6.129-*Trp53*^{tm1Brd} mice were not significantly different from controls (data not shown).

Hematology

Hematological parameters for formaldehyde-exposed C3B6F1.129-*Trp53*^{tm1Brd} (Table 2) and B6.129-*Trp53*^{tm1Brd} (Table 3) mice were not significantly different from their respective controls. Neither strain showed any indication of treatment-related hematotoxicity, leukemia, or lymphoma.

Histopathology

Nasal Cavity

Formaldehyde exposure-related non-neoplastic lesions were observed primarily in the nasal cavity of C3B6F1.129-*Trp53*^{tm1Brd} and B6.129-*Trp53*^{tm1Brd} mice. These nasal lesions were quantitatively and qualitatively similar in both strains. Nasal cavity lesions considered related to

formaldehyde exposure are summarized in Table 4. The number of animals examined per group includes the early death animals.

The only nasal cavity lesion observed in the control C3B6F1.129-*Trp53*^{tm1Brd} and B6.129-*Trp53*^{tm1Brd} animals was minimal hyaline degeneration of the respiratory epithelium, consisting of one or more small foci of epithelial cells containing intra-cytoplasmic accumulation of brightly stained eosinophilic material. This minimal lesion, observed in many of the control animals, is considered a spontaneous background finding.

Squamous metaplasia of the respiratory epithelium was observed in the nasal cavity of many C3B6F1.129-*Trp53*^{tm1Brd} and B6.129-*Trp53*^{tm1Brd} mice exposed to 7.5- and 15-ppm formaldehyde. The incidence and average severity (minimal to mild) of squamous metaplasia were greater in the 15-ppm group animals as compared with the 7.5-ppm animals (Table 4). Squamous metaplasia was observed consistently in Level 1, presumably because this level of the nose was exposed to the highest concentration of formaldehyde, and occasionally in Level 2, especially in the 15-ppm exposure groups (Figure 2). This lesion was not observed in Level 3. Squamous metaplasia was observed most commonly on the medial surface of the maxilloturbinates, facing the nasal septum. Other affected sites included the lateral wall, tips of the nasoturbinates, and, occasionally, the dorsal surface of the dorsal meatus. Squamous metaplasia was characterized microscopically by areas of replacement of the normal respiratory epithelium by a thin to occasionally moderately thick layer of stratified squamous epithelium. In some cases, the squamous epithelium was quite thin and was recognized as squamous epithelium by the presence of a layer of thin, laterally flattened cells on the epithelial surface typical of squamous epithelium. Often, a thin to moderately thick layer of keratin, sometimes containing cell debris, was present on the epithelial surface of turbinates in exposed (Figure 3B) but not control (Figure 3A) mice. In a few noses, accumulated keratin was present in the space behind a turbinate scroll, and in some cases filled the space behind the scroll (Figure 3C).

Osteogenesis, proliferation of new bone, was observed in the turbinate bone in a few C3B6.129F1-*Trp53*^{tm1Brd} and B6.129-*Trp53*^{tm1Brd} animals exposed to formaldehyde (Table 4). Microscopically, the osteogenesis had a similar appearance in the two strains and in each animal consisted of a small focus of proliferating bone within the lamina propria of the affected turbinate characterized by eosinophilic osteoid containing numerous large plump osteoblast nuclei (Figure 3D).

Neoplasms in C3B6.129F1-Trp53tm1Brd Mice

Several neoplasms were observed in control and formaldehyde-exposed C3B6.129F1-*Trp53*^{tm1Brd} mice, and none was considered caused by formaldehyde exposure (Table 5). Three lymphomas were found in the early death C3B6.129F1-*Trp53*^{tm1Brd} animals: one in the 7.5-ppm group involving the thymus and two lymph nodes, and the remaining two in the 15-ppm group involving only the thymus. No lymphomas were observed in the control group. The incidences of lymphoma in the formaldehyde-treated groups were not statistically significant (p>0.05) relative to controls. The lymphomas all had a typical and similar morphologic appearance, and consisted of diffuse sheets of relatively large lymphocytes with large, moderately pleomorphic basophilic, granular nuclei with one or more prominent nucleoli and a scant amount of eosinophilic cytoplasm (Supplemental Figure 1).

Five osteosarcomas were found in bone and skeletal muscle of C3B6.129F1-*Trp53*^{tm1Brd} mice (Table 5). Osteosarcomas were present in two scheduled sacrifice animals (one control and one 7.5-ppm animal), and both had metastasized to the lung. The three remaining osteosarcomas occurred in the early death control animals. Microscopically, the osteosarcomas were discrete masses composed of irregular intersecting trabeculae of eosinophilic osteoid, the matrix material for bone, admixed with variable numbers of highly pleomorphic neoplastic spindle-shaped cells (Figure 4A). Although osteosarcomas are considered to originate from bone, three osteosarcomas (from the early death control animals) had skeletal muscle attached to them but no bone. We assumed they had originated in bone and had invaded adjacent skeletal muscle, but that the bony origins of these neoplasms were not included in the microscopic sections. Osteosarcomas stained positively for vimentin, an intermediate filament typically present in cytoplasm of non-epithelial cells (Figure 4B), and stained negatively for smooth muscle actin, myogenin, and F4/80.

In addition to osteosarcomas, an undifferentiated sarcoma was also observed in the skeletal muscle of a 7.5-ppm C3B6.129F1-*Trp53*^{tm1Brd} animal. This neoplasm was a large, discrete mass consisting of numerous large, round to ovoid to elongated cells with abundant eosinophilic cytoplasm and small basophilic nuclei. Hepatocellular adenoma and carcinoma, histiocytic sarcoma, and hemangiosarcoma also were observed in some animals, but the incidences were not significantly increased or concentration related (Table 5).

Osteosarcomas in two control mice and a hemangiosarcoma in one 7.5-ppm animal were in contact with or had enveloped the microchip transponders used for animal identification. Sarcomas, osteosarcomas, and histiocytic sarcoma in eight C3B6.129F1-*Trp53*^{tm1Brd} animals were located remotely from the microchips.

Neoplasms in B6.129-Trp53^{tm1Brd} Mice

A variety of observed neoplasms in formaldehyde-exposed B6.129-*Trp53*^{tm1Brd} mice were not considered chemical related (Table 6). Lymphomas were present in two formaldehyde-exposed B6.129-*Trp53*^{tm1Brd} animals, one in the 7.5-ppm group and one in the 15-ppm group. The lymphoma in the 7.5-ppm animal, which appeared to have originated in the thymus, had spread widely, being present in nearly every tissue examined. In contrast, the lymphoma in the 15-ppm animal appeared to have originated in the mesenteric lymph node with a small amount of involvement of the bronchial lymph node. The lymphomas appeared morphologically similar to one another and to the lymphomas observed in the C3B6.129F1-*Trp53*^{tm1Brd} animals (Supplemental Figure 1).

Skeletal muscle rhabdomyosarcomas were observed in five formaldehyde-exposed B6.129-*Trp53*^{tm1Brd} animals, one in the 7.5-ppm group and four in the 15-ppm group (includes early death animals) (Table 6). Rhabdomyosarcomas were not observed in B6.129-*Trp53*^{tm1Brd} control animals. Although a statistically significant trend (p=0.042) was found, the incidence of rhabdomyosarcomas in the 15-ppm group was not statistically significant (p=0.133) relative to controls. Microscopically, the neoplasms were large masses composed of solid foci and interlacing bands of neoplastic cells generally admixed with varying amounts of dense fibrous tissue stroma (Figure 4C). The neoplasms were composed primarily of variably sized pleomorphic polygonal to fusiform cells, with large ovoid to fusiform, moderately basophilic to vesicular nuclei with one to several prominent nucleoli and small to moderate and occasionally large amounts of eosinophilic cytoplasm with indistinct borders. Few to numerous mitotic

figures were present, and varying numbers of large multinucleated cells resembling rhabdomyoblasts were observed. Cross striations were not observed; however, the tumors stained positively for vimentin, a marker for cells of mesenchymal origin including skeletal muscle, and myogenin, a nuclear transcription factor essential for skeletal muscle development and repair, and a specific marker for skeletal muscle (Figure 4D).

Various other neoplasms occurred at low incidences in control and formaldehyde-exposed B6.129-*Trp53*^{tm1Brd} animals, all of which were considered background lesions unrelated to formaldehyde exposure (Table 6). Microchip transponders were found in contact with, or enveloped by, tumors in five B6.129-*Trp53*^{tm1Brd} animals exposed to formaldehyde. Sarcomas in 10 B6.129-*Trp53*^{tm1Brd} animals were not associated with microchip transponders.

Discussion

Formaldehyde-induced injury to the nasal epithelium, regenerative proliferation, and mutations in these proliferating cells are key steps in the pathogenesis of formaldehyde-induced nasal SCC ^{4; 6}. Mutations in the tumor suppressor gene Trp53 have been detected in formaldehyde-induced nasal tumors and in preneoplastic hyperkeratotic plaques, indicating that Trp53 mutations are involved in the pathogenesis of SCC ^{9; 10}. Based on these data, Trp53[±] mice were expected to be highly susceptible to formaldehyde-induced nasal SCC, and possibly leukemia and other neoplasms. Under the conditions of this short-term study, however, formaldehyde exposure did not result in SCC of the nasal cavity or in an increased incidence of leukemia or lymphohematopoietic neoplasms in two genetically susceptible Trp53[±] mouse strains. Formaldehyde-induced loss heterozygosity (LOH) in Trp53 and loss of tumor suppressor function may have been insufficient to induce neoplasia. Although mutations to Trp53 can result in a dysfunctional protein, some mutations to Trp53 can result in a gain of function (GOF) that promotes tumor development ^{36; 37}. Formaldehyde-induced mutations of Trp53 that result in GOF may be necessary for induction of neoplasia.

Although rats are more susceptible than mice to formaldehyde-induced nasal tumors ³, a Trp53[±] rat strain was not available at the time of this study. Mice are reportedly less susceptible than rats because of their greater ability to reduce their minute ventilation upon repeated formaldehyde exposures ^{38; 39}, thereby reducing tissue damage and cell turnover in the nasal mucosa. Spontaneous SCC of the nasal cavity is extremely rare in rats and mice. Tumors of the nasal cavity have not been observed in NTP historical controls for B6C3F1/N or B6.129-*Trp53*^{tm1Brd} mice. Background nasal tumor incidences for the C3B6.129F1-*Trp53*^{tm1Brd} were not available. Induction of SCC in wild type mice by formaldehyde is also extremely rare. Exposure of C57BL/6 x C3HF1 mice to 14.3-ppm formaldehyde for 2 years followed by a 6-month holding period resulted in only two mice with nasal tumors ³.

In this study, mice were exposed to concentrations of formaldehyde that caused significant cell injury, inflammation, and regeneration in the nasal mucosa, which are recognized as key events in nasal SCC development ⁵. Although significant regenerative cell proliferation and squamous metaplasia were observed in exposed mice, a higher formaldehyde concentration, a longer exposure duration, or a longer holding period might be necessary for accumulation of genetic alterations in Trp53 and development of SCC in mice. The severity of nasal lesions in both mouse strains, the significantly reduced body weights of C3B6.129F1-*Trp53*^{tm1Brd} mice, and the lack of body weight gain in both strains, however, indicated that exposure to 15 ppm for 8 weeks

represented a maximum tolerated dose. An 8-week exposure duration was considered sufficient because the doubling time for HSPCs is reported to be between 2 and 4 weeks with the entire HSPC pool turning over every 8 weeks ^{40; 41}. Although exposed mice could have been held longer, 50 weeks of age was selected because, at approximately 70 weeks of age, about one-half of Trp53[±] mice reportedly develop background tumors ³³.

Formaldehyde exposure did not significantly increase the incidence of leukemia or lymphohematopoietic neoplasms in either B6.129-*Trp53*^{tm1Brd} or C3B6.129F1-*Trp53*^{tm1Brd} mice. The formaldehyde exposure concentrations were observed to cause disruption of the nasal epithelium, potentially allowing exposure of the underlying nasal cavity stem cells and circulating hematopoietic stem cells in the nasal vasculature. Maximal exposure of stem cells would be expected to occur following disruption (ulceration, necrosis) of the epithelium. As noted in this study, however, the accessibility of the nasal stem cells to inhaled formaldehyde could decrease as the damaged nasal epithelium is rapidly replaced by the more resistant squamous epithelium. In addition, the squamous epithelium produced multiple layers of keratin that might also protect underlying cells from inhaled formaldehyde. Whether a similar phenomenon occurs in exposed rats is unclear. Lymphoma was observed in several formaldehyde-exposed mice and was absent in control groups for both mouse strains. The low incidence of lymphoma in formaldehyde-exposed mice, however, was not statistically significant. Lymphoma was not considered exposure related because of the low incidence, the lack of statistical significance, and because lymphoma is one of the most common spontaneous tumors reported in Trp53[±] mice ^{32; 42}.

Sarcomas were the most prevalent tumor observed in B6.129-*Trp53*^{tm1Brd} mice and were the most common cause of early deaths due to the rapid growth of these tumors. The use of subcutaneous microchip transponders for animal identification might have influenced the incidence of sarcomas in B6.129-*Trp53*^{tm1Brd}. Sarcomas can occur in B6.129-*Trp53*^{tm1Brd} mice in association with subcutaneous microchips but can also occur spontaneously and in reaction to other treatments ⁴³. Although the mechanism for a synergistic or additive effect of subcutaneous microchip implantation and formaldehyde exposure on skeletal muscle sarcoma development in B6.129-*Trp53*^{tm1Brd} is not clear, evidence is insufficient to rule out such an effect.

Osteosarcoma was a common spontaneous lesion in C3B6.129F1-*Trp53*^{tm1Brd} mice, occurring in about 15% of controls and in only one animal exposed to formaldehyde (7.5 ppm). Osteosarcomas are generally uncommon neoplasms in mice but appear to be more common in Trp53[±] mice. Microchips were found within or in contact with tumors in two of the four control mice with osteosarcoma, and in one mouse in the 7.5-ppm group, the microchip was in contact with a hemangiosarcoma. As noted with the skeletal muscle sarcomas in B6.129-*Trp53*^{tm1Brd} mice, immunostaining of osteosarcomas associated with, or remote from, microchips showed no differences.

Conclusion

Under the conditions of this study, inhalation exposure to a maximum tolerated dose of formaldehyde did not cause an increased incidence of nasal SCC, leukemia, or lymphohematopoietic tumors in Trp53[±] mice. Both mouse strains developed a variety of neoplasms, but all were considered spontaneous background lesions and not a result of

formaldehyde exposure. The results of this short-term carcinogenicity study do not support a role for Trp53 in formaldehyde-induced neoplasia.

Figure 1. Body Weights of Trp53[±] Mice Exposed to Formaldehyde

C3B6.129F1- $Trp53^{tm1Brd}$ and B6.129- $Trp53^{tm1Brd}$ mice were exposed to formaldehyde at 0 (air), 7.5, or 15 ppm for 8 weeks, and then held for 32 weeks without exposure. (A) Body weights of C3B6F1.129- $Trp53^{tm1Brd}$ mice exposed to 7.5-ppm formaldehyde were significantly less than controls (p<0.05) from week 1 to week 11 and at weeks 37 and 38. Body weights of mice exposed to 15-ppm formaldehyde were significantly less than controls (p<0.05) from week 1 to week 24 and at weeks 37 and 38. (B) Body weights of B6.129- $Trp53^{tm1Brd}$ mice exposed to formaldehyde were not significantly different from controls at any time point.

Figure 2. Squamous Metaplasia of the Nasal Cavity in Mice Exposed to Formaldehyde

(A) A low magnification showing the location of the maxilloturbinates (within the box) and the nasoturbinates located dorsally and attached to the roof of the nasal cavity on either side of the nasal septum, Level 1. (B and C) Higher magnifications of the maxilloturbinate (within the box) showing the normal respiratory epithelium covering the turbinate bones. The normal respiratory epithelium in this area consists of a single layer of ciliated, columnar, and non-ciliated cuboidal cells (arrows in C). (D, E, and F) Level I section of the nasal cavity from a high-dose (15-ppm) animal. As in A, panel D is a low magnification showing the location of the maxilloturbinates (within the box) and the nasoturbinates dorsally. E and F are higher magnifications of the affected turbinate epithelium (within the box). The normal respiratory epithelium has been replaced by keratinized, stratified squamous epithelium (arrows in panel F).

Figure 3. Keratin Accumulation and Osteogenesis in Nasal Cavity of Mice Exposed to Formaldehyde

C3B6.129F1-*Trp5*^{tm1Brd} and B6.129-*Trp53*^{tm1Brd} mice were exposed to formaldehyde at 0 (air), 7.5, or 15 ppm for 8 weeks, and then held for 32 weeks without exposure. Significant lesions were still present in the nasal cavity of both mouse strains when examined 32 weeks after formaldehyde exposure. (A) Normal appearing respiratory epithelium on the nasal turbinate of an air-exposed control C3B6.129F1-*Trp53*^{tm1Brd} mouse. H&E, 60x. (B) Squamous metaplasia of respiratory epithelium on the nasal turbinate of a C3B6.129F1-*Trp53*^{tm1Brd} mouse exposed to 15-ppm formaldehyde. Note multiple layers of keratin (arrows). H&E, 60x. (C) In some animals exposed to 15-ppm formaldehyde, accumulated keratin was present in the space behind a turbinate scroll and, in some cases, filled the space behind the scroll (asterisk). H&E, 20x. (D) Minimal osteogenesis of the nasoturbinate was present in a few mice exposed to 15-ppm formaldehyde. The lesion consisted of a small focus within the lamina propria consisting of eosinophilic osteoid containing numerous large plump osteoblast nuclei (arrows). H&E, 60x.

Figure 4. Neoplastic Lesions in Trp53[±] Mice Exposed to Formaldehyde

Histological appearance (A, C); hematoxylin and eosin, and immunohistochemical staining with vimentin (B) and myogenin (D) of tumors in C3B6.129F1-*Trp53*^{tm1Brd} mice and B6.129-*Trp53*^{tm1Brd} mice. (A) Osteosarcoma in a C3B6.129F1-*Trp53*^{tm1Brd} mouse, characterized by formation of irregular bone trabeculae and adjacent highly pleomorphic neoplastic spindle-shaped cells. Inset: Higher magnification of pleomorphic neoplastic cell types adjacent to bone trabeculae. (B) Vimentin-stained section of osteosarcoma shown in (A). Note pleomorphic neoplastic cells with cytoplasmic expression of vimentin, an intermediate filament typically present in non-epithelial cells. Inset: Higher magnification of pleomorphic neoplastic cell types with positively staining cytoplasm. (C) Rhabdomyosarcoma in a B6.129-*Trp53*^{tm1Brd} mouse, characterized by pleomorphic cells with varying amounts of cytoplasm and oval-to-elongated nuclei. Inset: Higher magnification of tumor cells showing oval-to-elongated nuclei, abundant cytoplasm, and mitotic activity. (D) Myogenin-stained section of rhabdomyosarcoma shown in (C). Note variably sized pleomorphic tumor cells with nuclear expression of myogenin, a transcription factor essential for skeletal muscle development and repair. Inset: Higher magnification of pleomorphic tumor cells showing positively staining oval and elongated nuclei.

Table 1. Mortality in Trp53[±] Mice Exposed to Formaldehyde

Formaldehyde Concentration	0 ppm	7.5 ppm	15 ppm
	C3B6.129F1-Trp5.		
Animals/group:	25	24	25
Early Deaths:	4 (16%)	3 (11%)	2 (8%)
Cause of Death:

Animals/group:	25	31	35
Early Deaths:	3 (12%)	4 (13%)	9 (26%)
Cause of Death:			
Rhabdomyosarcoma	0	1	3
Sarcoma	1	2	1
Osteosarcoma	1	0	0
Leiomyosarcoma	0	0	1
Carcinosarcoma	0	0	1
Histiocytic sarcoma	0	0	1
Ulcerative dermatitis	0	0	1
Nephropathy	0	0	1
Undetermined	1	1	0

Formaldehyde exposure had no statistically significant effect on survival of either mouse strain. Nine *C3B6.129F1-Trp53*^{tm1Brd} mice died or were euthanized early primarily due to the presence of large or ulcerated osteosarcomas. Most early deaths of B6.129-*Trp53*^{tm1Brd} mice (16) were due to the presence of large sarcomas and rhabdomyosarcomas.

^a NOS - not otherwise specified.

Re: NTP Mode of Action Research Relevant to the Formaldehyde IRIS Assessment

Dear Dr. Bahadori:

In October 2015, the American Chemistry Council Formaldehyde Panel (the Panel) submitted a letter to the previous NCEA Director, Dr. Ken Olden, calling attention to formaldehyde research conducted by the National Toxicology Program (NTP) National Institute of Environmental Health Sciences (NIEHS) which was presented at the 2014 and 2015 Society of Toxicology (SOT) meetings. The NTP research explored a hypothesized mode of action for leukemia in humans using two genetically predisposed strains of mice exposed to formaldehyde and found that formaldehyde inhalation did not cause leukemia or lymphohematopoietic neoplasia. In October 2016, we submitted a follow-up letter to EPA communicating our formal request to NTP to publish the research in a peer-reviewed scientific journal or, at a minimum, for NTP to issue a public technical report. I am pleased to report that in August 2017, the NTP released a research report titled: Absence of Formaldehyde-Induced Neoplasia in Trp53 Haploinsufficient Mice Exposed by Inhalation, which provides the full details of the research summarily presented at SOT.

The objective of the NTP study was to evaluate the potential role of the Trp53 gene in nasal carcinogenicity, leukemia or lymphohematopoietic cancer, and potentially other neoplasms in genetically susceptible mice. Male Trp53 haploinsufficient (Trp53+) mouse strains (B6.129-Trp53tm1Brd and C3B6.129F1-Trp53tm1Brd) were exposed via inhalation to 0 ppm, 7.5 ppm or 15 ppm formaldehyde for 8 weeks. Because evidence suggests a possible role of the Trp53 gene in formaldehyde-induced nasal squamous cell carcinomas, the authors hypothesized that formaldehyde-induced loss of Trp53 would result in an increase in susceptibility to formaldehyde-induced nasal squamous cell carcinoma, and possibly leukemia and other neoplasms. However, the study found that inhalation of a maximum tolerated dose of formaldehyde did not cause nasal tumors, an increased prevalence of leukemia or lymphohematopoietic cancer, or any other type of cancer in Trp53+ mice. The results from this study increase the weight of evidence that formaldehyde exposure is not causally associated with leukemia. EPA's IRIS Stopping Rules² allow for the inclusion of new research information until a few months before an assessment is released for review. This study report provides important information related to postulated modes of action for formaldehyde and should be evaluated and integrated into the formaldehyde weight of evidence framework. We also strongly encourage EPA to reach out to the NTP for additional insight and information on this study.

September 13, 2017 Page 2

EPA has previously indicated that it is committed to ensuring that the revised draft formaldehyde assessment reflects a transparent, rigorous, systematic review of available formaldehyde evidence which is consistent with the 2011 National Academy of Sciences (NAS) recommendations. The Panel has been committed to conducting research to address the recommendations of the NAS and engaging scientists on approaches to integrate the scientific evidence for formaldehyde. As we have previously communicated to EPA, in support of efforts to engage scientific experts on the formaldehyde science and methodologies for integrating the evidence, an invited scientific expert workshop has been scheduled for October 2017. This workshop will provide valuable insight on integrating the formaldehyde science which can inform the EPA's formaldehyde IRIS assessment. We are pleased that EPA IRIS staff accepted an invitation to participate in this workshop and look forward to the discussion.

The methods and approaches that EPA utilizes to systematically review and integrate the science to draw conclusions regarding potential human health risk will be a cornerstone in any future formaldehyde assessment. To help improve our understanding of the processes that will be applied to the formaldehyde assessment, we request that you provide responses to the following questions.

- 1. How is EPA considering new scientific information, like the NTP study, for incorporation into the weight of evidence for the formaldehyde IRIS assessment?
- 2. When did EPA last conduct a search of the formaldehyde literature for science to incorporate into the IRIS assessment and how frequently does EPA monitor the formaldehyde literature to identify potential studies that should be incorporated into the assessment?
- 3. What guidance documents or procedures will EPA utilize to evaluate study quality for studies relied upon to reach conclusions in the formaldehyde IRIS assessment? Please provide specific references if available.
- 4. When will EPA release a weight of evidence framework illustrating how various data streams (i.e. mechanistic, toxicology and epidemiology studies) are evaluated for quality and then integrated to reach conclusions about formaldehyde?
- 5. How has EPA addressed all the 2011 NAS recommendations for formaldehyde?
- 6. How will EPA seek public input and peer review on the formaldehyde IRIS assessment and what types of public meetings or workshops will be held to receive input?

Feel free to contact me by phone (202-249-6707) or email (<u>Kimberly_White@americanchemistry.com</u>) with any questions related to this letter. Additionally, a full copy of the study report is attached for your reference.

Sincerely,

Kimberly Wise White, PhD American Chemistry Council (ACC) Senior Director Chemical Products & Technology Division On Behalf of the ACC Formaldehyde Panel

Subject: Re: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)
Attachments: 2018 March 21 ACC IRIS Correspondence re Cr6 Studies.pdf

Dear Dr. Thayer,

Please see the attached letter written on behalf of the Hexavalent Chromium Panel of the American Chemistry Council requesting a stakeholder meeting with IRIS staff to present an overview of the most recent publications by the MOA study researchers, and to review important information relevant to the Cr(VI) genomics dataset that was communicated to Dr. Lyle Burgoon prior to his departure from EPA.

Thank you,

Eileen Conneely

RE: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)

Docket ID Nos. EPA-HQ-ORD-2014-0313 and EPA-HQ-ORD-2010-0540

Dear Dr. Thayer,

We recently learned from the EPA Office of Water that a draft IRIS assessment of hexavalent chromium (Cr(VI)) is expected to be publicly released by the end of 2018. To that end, we want to ensure that the IRIS office has been briefed on the most recent findings and publications by the Cr(VI) mode of action (MOA) study researchers, is familiar with all aspects of the MOA research, and considers the findings of this research, including the Cr(VI) genomics dataset, during the development of the toxicological review for oral exposure to Cr(VI). Thus, on behalf of the Hexavalent Chromium Panel of the American Chemistry Council (ACC), I write to request a stakeholder meeting as soon as possible to present an overview of the most recent publications by the MOA study researchers, including

- an integration of mechanistic and pharmacokinetic information to derive an oral reference dose and margin-of-exposure values for Cr(VI),
- an analysis of Eastmond's ten factors for considering the mode of action of Cr(VI)induced gastrointestinal tumors in rodents, and
- a recovery study comparing the duodenal histopathology in mice following exposure to Cr(VI), captan, and folpet.

Additionally, we wish to review important information relevant to the Cr(VI) genomics dataset that was communicated to Dr. Lyle Burgoon prior to his departure from EPA.1

¹ This letter follows our most recent correspondence to EPA's IRIS program on October 16, 2017 and April 27, 2017, our February 4, 2016, correspondence to Vincent Cogliano, and an August 10, 2016 meeting between ACC, the MOA study researchers, and EPA's IRIS staff working on the Cr(VI) assessment.

ED_002126_00002987-00001

Kristina Thayer, Ph.D. March 21, 2018 Page 2

I will be following up to schedule a meeting as soon as possible with you and other appropriate staff to discuss this information in detail. If you have any questions, please contact me at eileen connectly@americanchemistry.com or at 202.249.6711.

Sincerely,

Eileen Conneely

Attachment 1. Cr(VI) MOA Study Published Papers (updated March 20, 2018)

Overview

The Cr(VI) Mode of Action (MOA) Research Study was designed to understand how hexavalent chromium [Cr(VI)] in drinking water is associated with carcinogenesis in rats and mice. The project involved investigators from multiple institutions and conducted two 90-day drinking water studies, using the same mouse (B6C3F1) and rat (Fisher 344) strains used in the NTP study. The in-life portions of the study (i.e., the exposure, macro- and microscopic examinations, and some biochemical analyses) were conducted at the same research facility, Southern Research, that conducted the NTP study to further minimize inter-study variability. Histological lesions, biochemical analyses, toxicogenomic analyses, pharmacokinetic analyses, and mutational analyses were examined in the target tissues of interest, i.e., the small intestine and oral mucosa, of the mice and rats. In addition, in vitro cell culture studies were conducted to further inform the Cr(VI) MOA. The Cr(VI) MOA Research Study used the same concentrations of Cr(VI) in drinking water as the NTP study and also included lower Cr(VI) concentrations, which are more indicative of possible environmental exposures, such as U.S. drinking water.

See http://cr6study.info/ for more information on the MOA research.

Subject: RE: request to meet with IRIS staff concerning genomics dataset for Cr(VI) Attachments: ACC EPA IRIS Correspondence re Cr6 Genomics Dataset 6 19 18.pdf

Dear Dr. Thayer,

Thank you for your response. It would be appreciated if the Cr(VI) research group would have adequate time to present at your protocol meeting.

Since the IRIS program has declined my request for a meeting, we are submitting the attached correspondence to the docket for the Cr(VI) IRIS assessment. The attached correspondence gives an overview of events relevant to the Cr(VI) genomics data, an explanation for the number of microarrays available through different online data repositories, and a general findings comparison between published analyses (i.e. genomics data analysis methods and standards have evolved over time and yet general findings have remained consistent despite varying approaches).

Please let me know if you have any questions.

Thank you,

Eileen Conneely

Subject: RE: request to meet with IRIS staff concerning genomics dataset for Cr(VI)

Thank you Eileen for your note.

As you can imagine with all the focus on scientific transparency at the Agency we really prefer to have science meetings occur in a public forum. Perhaps it's possible that multiple 10-minute slots could be combined to give the research group more time to present the overview of recent MOA publications?

The approach for considering toxicogenomic and other mechanistic evidence would be described in the systematic review protocol. The protocol will also present the screening results of studies for consideration in the assessment (included, excluded, tagged as potentially relevant supplemental information). Our Cr(VI) team is certainly familiar with publications from your MOA research group but are not able to discuss our interpretation of the science until we have a draft assessment for public comment.

Thanks for understanding and we will try to solidify the date of the meeting shortly.

Sincerely,

Kris

Kristina Thayer, Ph.D.

Subject: request to meet with IRIS staff concerning genomics dataset for Cr(VI)

Dear Dr. Thayer,

I appreciate your response. You noted that EPA expects to release a protocol on hexavalent chromium (Cr(VI)) this June or July and that EPA plans to convene a public webinar where EPA staff would summarize the protocol content and listen to public comment on the protocol. We appreciate the opportunity to present comments during the planned EPA webinar, but ten minutes would not be adequate to present an overview of the most recent MOA research publications. We hope that additional time will be granted. Please also let us know as soon as possible when you have set the date for the webinar, as many interested parties may have planned to be away on summer vacations.

Additionally, we have questions on what full implementation of systematic review entails for the EPA IRIS program, especially since we have heard that the IRIS program has not fully considered the large toxicogenomics dataset funded by the Hexavalent Chromium Panel. The MOA researchers communicated with Lyle Burgoon, formerly at EPA, from 2014 – 2016 concerning the Cr(VI) genomics dataset, and we would like to present an overview of events relevant to the Cr(VI) genomics data, an explanation for the number of microarrays available through different online data repositories,

and a general findings comparison between published analyses (i.e. genomics data analysis methods and standards have evolved over time and yet general findings have remained consistent despite varying approaches).

To ensure that all of this important genomics data is being considered in the assessment process, we would like to schedule a meeting as soon as possible with you and the IRIS staff working on the Cr(VI) assessment.

Sincerely,

Eileen Conneely

Subject: RE: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)

Eileen,

Thanks again for reaching out. We appreciate your sharing the list of recent publications.

We anticipate releasing a protocol on hexavalent chromium (Cr6) for public comment this June-July timeframe. The protocol will summarize the rationale for conducting the assessment, describe screening criteria to identify relevant literature, outline the approach for evaluating study quality, describe the process of evidence synthesis/integration, and dose-response methods. The protocol is a new document for the IRIS Program developed as part of its full implementation of systematic review (see presentation materials for the NAS Workshop "Review of Advances Made to the IRIS Process"). Obviously, the chromium assessment has been underway for some time now and release of this protocol should not be construed as a re-start. Rather, we are releasing the protocol so that the chromium assessment has similar public engagement steps as assessments started more recently. The protocol will include the list of studies currently included in the assessment.

Given the high level of interest in the IRIS hexavalent chromium assessment, we are planning to convene a public science webinar concurrent with the public comment period on the protocol. The format of this webinar would be a presentation by EPA staff summarizing the protocol content, followed by a public comment session where the Hexavalent Chromium Panel could present the overview suggested in your note below during a 10-minute public comment period. It may be possible to extend the length of the oral comment period depending on the number of registered speakers. EPA scientists would respond to questions of clarification but would not be discussing scientific interpretation of the evidence at this point in our process. Written materials could also be submitted as part of the public comment period.

We understand you may have questions on what full implementation of systematic review entails and how it integrates with the IRIS process. Although these topics are covered in the NAS presentation materials, we would be happy to schedule a meeting if you would like to discuss further.

Subject: Re: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)

Dear Dr. Thayer,

Please see the attached letter written on behalf of the Hexavalent Chromium Panel of the American Chemistry Council requesting a stakeholder meeting with IRIS staff to present an overview of the most recent publications by the MOA study researchers, and to review important information relevant to the Cr(VI) genomics dataset that was communicated to Dr. Lyle Burgoon prior to his departure from EPA.

Thank you,

Eileen Conneely

RE: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)

Docket ID Nos. EPA-HQ-ORD-2014-0313 and EPA-HQ-ORD-2010-0540

Dear Dr. Thayer,

Following up on my correspondence from March 21, 2018 and April 30, 2018, the American Chemistry Council's (ACC) Hexavalent Chromium Panel (Panel) has concerns about how the IRIS program will incorporate the large toxicogenomics dataset sponsored by the Panel into the assessment of hexavalent chromium [Cr(VI)]. The mode of action (MOA) researchers communicated with Dr. Lyle Burgoon, formerly at EPA, from 2014 – 2016 concerning this Cr(VI) toxicogenomics dataset, and in my last correspondence I requested a meeting with EPA to discuss the following concerning use of the dataset to inform the MOA for tumors observed in a 2-year rodent cancer bioassay:

- 1. A timeline of events relevant to the Cr(VI) genomics data;
- 2. An explanation for the varying number of microarrays available through different online data repositories; and
- 3. A general findings comparison between published analyses.

Since the IRIS program has declined my request for a meeting, we are submitting this information into the docket for the Cr(VI) IRIS assessment.

Timeline of events relevant to Cr(VI) genomics data

Table 1 summarizes the timeline of events surrounding the Cr(VI) genomics data and clarifies any potential discrepancies between data repositories over time and differences in analysis strategies used in different publications.

Table 1. Timeline summarizing events involved in the Cr(VI) genomics dataset.

DATE	EVENT	RELEVANT WEBSITE ¹
2012	Two studies were published using: 1. Mouse duodenum and jejunum data (Kopec et al. 2012a) 2. Mouse and rat duodenum and jejunum data (Kopec et al. 2012b). Data from manuscripts were deposited in dbZach, an internal data management system that is compliant with the Minimum Information About a Microarray Experiment (MIAME) standard (Burgoon et al. 2006).	dbZach
2014	Data were provided online through Cr6study.info. Data included: 1. qRT-PCR data used in the Kopec (2012a,b) publications 2. Raw genomics microarray data used in the Kopec (2012a,b) publications • All raw microarray data (as .gpr files) for the mice and rat, oral palate, duodenum, and jejunum (day 8 and 91), alongside a metadata file	Cr6study.info
	3. Genomics analysis code used in the Kopec (2012a,b) publications Note that this analysis included data from both array dyes (Cy3 and Cy5) and data were processed using in-house code and algorithms, which are provided in Cr6study.info, and include: SAS code used to analyze microarray data (note: input files with appropriate tags referred to in the code were not originally provided – see 2018 update) R code to calculate P1(t) statistics	
	 4. Genomics analysis statistical results used in the Kopec (2012a,b) publications Excel worksheets containing all array probesets and their corresponding fold change values and P1(t) statistical results for the rat and mouse, duodenum and jejunum, at day 8 and 91 	
APRIL 2016	A labeling error was identified in the raw genomics data for the rat within the files in Cr6study.info.	Cr6study.info

DATE	EVENT	RELEVANT WEBSITE ¹
	 Specifically, incorrect probeset identifiers were included in the rat raw array data files (.gpr files). These identifiers were corrected, and Dr. Burgoon was notified of this edit via email on January 8, 2016 and April 5, 2016 (see ATTACHMENT A) This labeling error had no effect on the analyses or interpretation reported in Kopec et al. (2012b) 	
AUGUST 2016	ToxStrategies received a request from Stiven Foster at the US EPA to access data from the Cr6study.info website. Access was granted on August 10, 2016 (see ATTACHMENT A).	Cr6study.info
SEPTEMBER 2016	 All raw and processed array files were uploaded into the NCBI's Gene Expression Omnibus (GEO) repository. These data included: All raw microarray files Processed array data, consisting of quantile normalized expression data derived from the Cy3 array signal. Note: these processed array data were updated in 2016 and differ from those used in the Kopec (2012a,b) publications. Updated results from these data were published (Thompson et al. 2016, Rager et al. 2017, described below) 	GEO
	Data were uploaded alongside a reference to the Thompson et al. (2016) publication (final publication on November 2016, below)	
NOVEMBER 2016	A study was published using the mouse and rat palate data (Thompson et al. 2016), using the updated array processing strategy provided in GEO.	GEO
MAY 2017	A study was published using the mouse duodenum data (Rager et al. 2017), using the updated array processing strategy provided in GEO.	GEO
FEBRUARY 2018	The GEO posting was updated to include additional citation information, referencing Rager et al. (2017).	GEO
FEBRUARY 2018	The link to the raw microarray files was temporarily not working through Cr6study.info. This link was corrected.	Cr6study.info
FEBRUARY 2018	More data were provided to further support the analysis conducted in the Kopec (2012a,b) publications. • To detail, the original SAS code used in the genomics statistical analysis was originally provided in the 2014 data upload. This update added the specific input files that were used to execute the SAS code.	Cr6study.info

Explanation for varying numbers of arrays on different websites

The number of array samples included at Cr6study.info, representing the analysis published in the Kopec et al. (2012a,b) publications, differs slightly from the number of array samples included in the GEO repository, representing the analyses published in the recent publications (Rager et al. 2017, Thompson et al. 2016). Specifically, the arrays in **Table 2** were excluded from the GEO repository.

Table 2. Arrays that are included in Cr6study.info but excluded in the GEO repositories.

GPR file	Species, Tissue, and Duration Group	Array Components ¹	Note
4417.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3426, control Cy5 signal: animal ID 3401, exposed at 4 mg/L dose	Duplicate
4418.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3401, exposed at 4 mg/L dose Cy5 signal: animal ID 3426, control	Duplicate
4451.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3416, exposed at 14 mg/L dose Cy5 signal: animal ID 3426, control	Technical replicate
4452.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3421, exposed at 60 mg/L Cy5 signal: animal ID 3426, control	Technical replicate
4453.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3409, exposed at 170 mg/L Cy5 signal: animal ID 3425, control	Technical replicate
4454.gpr	Mouse duodenum day 91	Cy3 signal: animal ID 3400, control Cy5 signal: animal ID 3404, exposed at 520 mg/L	Technical replicate

¹ Note that data from the Cy3 and Cy5 dye signals were used in the Kopec et al. (2012a,b) publications; while analyses only focused on data from the Cy3 dye signal in the Rager et al (2017) and Thompson et al. (2016) publications to minimize potential dye bias / interference issues.

These arrays in Table 2 were excluded from the GEO repository, reflective of the more recent Rager et al. (2017) publication, because these arrays represented duplicated data or technical replicates. Specifically, chip scan data in array IDs 4417 and 4418 were identified as duplicated data; thus both of these arrays were removed from the analysis. Array IDs 4451, 4452, 4453, and 4454 represented technical replicate arrays used for internal quality purposes. These arrays measured gene expression profiles of samples from animals that were already accounted for by

¹ website URLs are Cr6study.info (https://cr6study.info), dbZach (http://dbzach.fst.msu.edu/), GEO (https://www.ncbi.nlm.nih.gov/geo/query/acc.cgi?acc=GSE87262).

Kristina Thayer, Ph.D. June 19, 2018 Page 5

other arrays. Neither the Kopec et al. nor the Rager et al. analyses included technical replicate arrays.

The biological replicates were explained in the Rager et al. (2017) publication in the methods section:

"RNA samples were assessed in biological triplicate in all dose groups (0, 0.03, 4, 14, 60, 170, and 520 mg/l SDD at day 8 and day 91) except for the 4 mg/l SDD exposure group from day 91, which was analyzed in biological duplicate due to potential microarray quality issues."

The arrays that were removed due to duplicate issues or represented technical replicates were excluded from the data in the GEO repository, to be consistent with the Rager et al. (2017) publication. The number of biological replicates used in this analysis is detailed in Table 3. All array data, including duplicate data/technical replicates, are included in Cr6study.info.

Table 3. Biological replicate numbers in the GEO database, reflective of the array analysis in Rager et al. (2017).

Duration Species, Tissue		Dose (mg/L sodium dichromate dihydrate)							
Group	species, rissue	0	0.3	4	14	60	170	520	Total
8 days	Mouse, duodenum	3	3	3	3	3	3	3	21
91 days	Mouse, duodenum	3	3	21	3	3	3	3	20

¹ Note that the analyses conducted by Kopec et al. (2012a,b) contained one more biological replicate in this dose group.

General comparison between publication findings

Genomics data analysis methods and standards have evolved over time. Thus, the data processing and statistical methods differed between the original publications using the Cr(VI) genomics data in the mouse duodenum (Kopec et al. 2012a,b) and more recent, updated publication (Rager et al. 2017); however, overall general findings remained consistent despite these varying approaches. For example, Kopec et al. 2012a, which focused on the mouse intestinal responses, identified genes involved in oxidative stress and cytotoxicity with altered expression, representing early key events. Other pathways noted as enriched included those involved in cell cycle, lipid metabolism, and immune response. Pathways involved in DNA repair were also noted in the day 8 results, including the nucleotide excision repair pathway, which did not show enrichment at day 91 (Kopec et al. 2012a). Similarly, Kopec et al. (2012b) noted pathways relevant to oxidative stress, immune response, protein synthesis, cell cycle/cell growth and proliferation, and DNA damage and repair in the mouse and rat duodenum and jejunum.

Similar results were apparent in the Rager et al. (2017) analysis focusing on the mouse duodenum, with pathways involved in cell stress and injury, cell death, and cell growth, proliferation and

Kristina Thayer, Ph.D. June 19, 2018 Page 6

development involved in early key events that were also sustained in the day 91 results. The nucleotide excision repair pathway was also identified as enriched in the day 8 results, but not the day 91 results; and it was noted that this pathway included eight genes showing increased expression associated with Cr(VI), all of which were involved in general DNA transcription and cell cycle signaling. Pathways involved in metabolism and immune response were also identified as enriched, similar to Kopec et al. (2012a). In summary, analysis strategies have evolved over time surrounding the use of the Cr(VI) genomics data; still, general findings have remained consistent despite varying approaches.

In conclusion, the raw and processed Cr(VI) genomics data are provided online, and the methods used to analyze these data have evolved over time to parallel ongoing advances in genomics-based assessments. This robust data set provides important information that can be used to further understand the MOA of Cr(VI). We have been fully transparent about the research conducted, including making the raw genomics data as well as other raw data available to EPA and other scientists.

If you have any questions, please contact me at <u>eileen_conneely@americanchemistry.com</u> or at 202-249-6711.

CC: Rusty Thomas, Tim Zacharewski, Gibbons.Catherine@epa.gov, Chad Thompson, Deb Proctor

Lyle: as I mentioned in the meeting on Monday, the data will be posted to our new Cr(VI) MOA website before SOT. Once the site is live I will send you all a link to it. You will be able to download the genomics data at that time.

The approach and methods that were used to analyze the data are adequately described in the Kopec papers. Our use of the genomics data to support the Mode of Action can be found in our Critical Reviews in Toxicology paper. Links to these Open Access papers can be found at the web page below:

Subject: Cr(VI) raw microarray data

Dr. Thompson,

It was nice seeing you and Dr. Harris (via video) at Monday¹s meeting @ NCEA HQ. I was quite pleased to hear Ms. Mason state that ACC expected the researchers would share their data and results with NCEA.

I¹m following up on our discussion from Monday and am requesting access to all of your raw microarray data, as well as your analyzed data that supports the conclusions in your papers. In addition, it would be helpful if you could also supply us with the analysis code that was used, any protocols used for the analyses, and any other supporting documentation that may help us understand how the assays and analyses were performed.

For clarity, I am using the MIAME definition of ³raw data², and my request for the additional information is in line and keeping with the MIAME standard, which can be found here: http://www.mged.org/Workgroups/MIAME/miame.html.

To facilitate data transfer, I can set-up an EPA-based FTP site where you can upload the data.

Thanks again for presenting your latest results to us, and I look forward to receiving the data.

Cheers,

Lyle

Hey Mark,

Thanks. The Army has no interest in chromium (thankfully). However, EPA is in the process of contracting with the Army to reanalyze the data. So, in preparation for that, we requested the data.

On a side note, in my new federal job I'm soft money, and we operate like a consulting company. So if in the future you need CompTox or toxicogenomic support, let me know. We can accept funds from companies for collaborative work.

If you want to chat sometime, my number is 517-303-5368.

Army moves paperwork pretty quick. If I know it's coming, I can grease the skids. If you have a tight turnaround on paperwork approval needed my lab director can expedite and maybe 1-2weeks we should be able to turn it around. Unless it's after July 31, then it might take longer bc of the backlog at contracts.

Lyle: we were doing some work on the Cr(VI) genomics data and noticed an error in the rat data (some probe ID's were mislabeled). The actual data is correct - just the labels are wrong. This doesn't impact our publications but does impact the data available for download from our Cr(VI) study website. MSU is fixing and I will alert you when we update the files.

Subject: Cr(VI) raw microarray data

Dr. Thompson,

It was nice seeing you and Dr. Harris (via video) at Monday's meeting @ NCEA HQ. I was quite pleased to hear Ms. Mason state that ACC expected the researchers would share their data and results with NCEA.

I'm following up on our discussion from Monday and am requesting access to all of your raw microarray data, as well as your analyzed data that supports the conclusions in your papers. In addition, it would be helpful if you could also supply us with the analysis code that was used,

any protocols used for the analyses, and any other supporting documentation that may help us understand how the assays and analyses were performed.

For clarity, I am using the MIAME definition of "raw data", and my request for the additional information is in line and keeping with the MIAME standard, which can be found here: http://www.mged.org/Workgroups/MIAME/miame.html.

To facilitate data transfer, I can set-up an EPA-based FTP site where you can upload the data.

Thanks again for presenting your latest results to us, and I look forward to receiving the data.

Cheers,

Lyle

Subject: Re: Cr(VI) raw microarray data

Date: Monday, March 17, 2014 at 9:40:37 AM Central Daylight Time

From: Burgoon, Lyle

To: mharris@toxstrategies.com

cc: tzachare@msu.edu, Gibbons, Catherine, cthompson@toxstrategies.com

Hi Mark,

I have read the Kopec, et al papers again, at your suggestion. Reading them reaffirms that we absolutely need to have the analysis code in order to understand what exactly was done. Per the MIAME standard (Minimum Information About a Microarray Experiment: http://www.mged.org/Workgroups/MIAME/miame 2.0.html):

The essential laboratory and data processing protocols are usually described in the journal methods section. It is sufficient to simply reference the standard experimental or data processing protocols, such as MAS5 or RMA. However, if a protocol depends on parameters that can be varied, their values should be provided. If novel or non-standard data processing protocols are used, these should be described in sufficient detail to allow the user to understand what exactly has been done in the experiment and how the data have been analysed to reach the conclusions of the study.

In the case of the Kopec, et al papers, the analysis protocols used are non-standard data processing methods. As far as I can tell, these methods are commonly used in Dr. Zacharewski's laboratory; however, they are not commonly used elsewhere. The Eckel, et al 2005 and Eckel, et al 2004 papers describe analysis methods used in the Kopec, et al papers that require parameterization or changes to the code in order to work properly. Thus, it is critical for us to see the code in order to understand how the data were treated. Without the code we will be unable to understand how you came to draw the hypotheses you did in the Kopec, et al and subsequent papers. Without this understanding, we cannot interpret your results.

As MIAME is a community standard, first adopted several years ago by many prominent journals, you can see that this request is not unusual.

Likewise, we need to have the rawest form of the data possible for the QRT-PCR analyses, which Kopec, et al have used to support their microarray data. At a minimum, this would include any spreadsheets or text files of the data from the ABI machine, detailing all of the mathematical manipulations of the data from prior to standardization, through normalization, ratio calculation, and statistical analysis. Note: I couldn't find any details on how the statistical analysis of the QRT-PCR was performed, nor can I find a reference for how the standard errors of a ratio were calculated.

We may have additional data requirements and needs as we dig into the toxicogenomics data further, and we look forward to working with you in obtaining the information we need to better understand these studies.

Thanks,

Lyle

CC: Gibbons, Catherine, Vandenberg, John, Flowers, Lynn

Hi Mark,

We cannot access the data at this time due to our inability to agree to the Terms and Conditions associated with data access found here: http://cr6study.info/study-data/terms-and-conditions/

Specifically, we request that ToxStrategies delete the indemnification clause in the Terms and Conditions. As written, the Agency cannot agree to the terms as it would be a violation of the Anti-Deficiency Act (i.e., making a commitment to an unknown future cost is a direct violation of the Anti-Deficiency Act).

Please let me know what action you are willing to take as soon as possible. As you are aware, time is of the essence with respect to the Cr(VI) IRIS Assessment. Your prompt attention to this matter is appreciated.

Thanks,

Lyle

Subject: request to meet with IRIS staff concerning genomics dataset for Cr(VI)

Dear Dr. Thayer,

I appreciate your response. You noted that EPA expects to release a protocol on hexavalent chromium (Cr(VI)) this June or July and that EPA plans to convene a public webinar where EPA staff would summarize the protocol content and listen to public comment on the protocol. We appreciate the opportunity to present comments during the planned EPA webinar, but ten minutes would not be adequate to present an overview of the most recent MOA research publications. We hope that additional time will be granted. Please also let us know as soon as possible when you have set the date for the webinar, as many interested parties may have planned to be away on summer vacations.

Additionally, we have questions on what full implementation of systematic review entails for the EPA IRIS program, especially since we have heard that the IRIS program has not fully considered the large toxicogenomics dataset funded by the Hexavalent Chromium Panel. The MOA researchers communicated with Lyle Burgoon, formerly at EPA, from 2014 – 2016 concerning the Cr(VI) genomics dataset, and we would like to present an overview of events relevant to the Cr(VI) genomics data, an explanation for the number of microarrays available through different online data repositories, and a general findings comparison between published analyses (i.e. genomics data analysis methods and standards have evolved over time and yet general findings have remained consistent despite varying approaches).

To ensure that all of this important genomics data is being considered in the assessment process, we would like to schedule a meeting as soon as possible with you and the IRIS staff working on the Cr(VI) assessment.

Sincerely,

Eileen Conneely

Subject: RE: Draft IRIS Assessment of Hexavalent Chromium (Chromium VI)

Eileen,

Thanks again for reaching out. We appreciate your sharing the list of recent publications.

We anticipate releasing a protocol on hexavalent chromium (Cr6) for public comment this June-July timeframe. The protocol will summarize the rationale for conducting the assessment, describe screening criteria to identify relevant literature, outline the approach for evaluating study quality, describe the process of evidence synthesis/integration, and dose-response methods. The protocol is a new document for the IRIS Program developed as part of its full implementation of systematic review (see presentation materials for the NAS Workshop "Review of Advances Made to the IRIS Process"). Obviously, the chromium assessment has been underway for some time now and release of this protocol should not be construed as a re-start. Rather, we are releasing the protocol so that the chromium assessment has similar public engagement steps as assessments started more recently. The protocol will include the list of studies currently included in the assessment.

Given the high level of interest in the IRIS hexavalent chromium assessment, we are planning to convene a public science webinar concurrent with the public comment period on the protocol. The format of this webinar would be a presentation by EPA staff summarizing the protocol content, followed by a public comment session where the Hexavalent Chromium Panel could present the overview suggested in your note below during a 10-minute public comment period. It may be possible to extend the length of the oral comment period depending on the number of registered speakers. EPA scientists would respond to questions of clarification but would not be discussing scientific interpretation of the evidence at this point in our process. Written materials could also be submitted as part of the public comment period.

We understand you may have questions on what full implementation of systematic review entails and how it integrates with the IRIS process. Although these topics are covered in the NAS presentation materials, we would be happy to schedule a meeting if you would like to discuss further.

Sincerel	у,

Re: 2018 Commentary on New Formaldehyde Studies in Trp53 Haploinsufficient Mice: Further Support for Nonlinear Risks From Inhaled Formaldehyde

Dear Dr. Bahadori:

I am writing to call to your attention a June 2018 article by C. Thompson titled: "Commentary on New Formaldehyde Studies in Trp53 Haploinsufficient Mice: Further Support for Nonlinear Risks From Inhaled Formaldehyde." The article discusses the relevance of a 2017 final report by the U. S. National Toxicology Program (NTP) that explored the potential involvement of p53 mutation in formaldehyde-induced nasal tumors and lymphohematopoietic cancers. The NTP study demonstrated that inhalation of a maximum tolerated dose of formaldehyde did not cause nasal tumors, did not cause an increased prevalence of leukemia or lymphohematopoietic cancer, and did not cause any other type of cancer in Trp53^{+/-} mice. It provides additional support for utilizing a non-linear threshold model for the dose-response analysis of formaldehyde.

The commentary reinforces that the mode of action of inhaled formaldehyde must be foundational for characterizing the hazard and dose-response assessment. The 2017 NTP report adds to the overall weight of the evidence illustrating that inhaled formaldehyde is not leukemogenic. The 2017 NTP report is consistent with results from available mode of action studies demonstrating that nasal tumors observed in rodent studies following inhalation exposure to formaldehyde are limited to the nasopharyngeal region and are only associated with exposure to high concentrations of formaldehyde. Moreover, the 2017 NTP report lends further support that formaldehyde-induced nasal tumors are highly unlikely to be caused via a mutagenic mode of action as is typically assumed in linear dose-response modeling for cancer assessments.

Consideration of mode of action information is critical in establishing the biological plausibility of carcinogenicity and understanding how inhalation of formaldehyde may impact normal physiological levels and processes. The 2011 NAS report¹ called for selecting outcomes on the basis of available evidence and an understanding of mode of action. The application and integration of this information is essential to reduce uncertainty in characterizing potential human health risk from formaldehyde exposures and its importance cannot be overstated. The

Commentary

Formaldehyde is a widely used industrial chemical, a byproduct of combustion, and is generated endogenously. Although classified by many organizations as a carcinogen, the World Health Organization (WHO) has set an exposure guideline of 0.08 ppm based on irritant properties of formaldehyde. The US Environmental Protection Agency has proposed far lower safety values based, in part, on controversial associations between formaldehyde exposure and increased risk of leukemia. Therefore, it is of interest that the National Toxicology Program (NTP), a division of the National Institute of Environmental Health Sciences, recently released an NTP Research Report that explored the potential involvement of p53 mutation in formaldehyde-induced nasal tumors as well as lymphohematopoietic cancers.² This study has not been published in the peer-review literature, nor is the report currently indexed in search engines like PubMed and Embase. Because the carcinogenicity of formaldehyde remains controversial and there are ongoing assessments of formaldehyde in the United States, the new NTP Research Report is an important addition to the database for informing the carcinogenicity of inhaled formaldehyde. This commentary highlights some important implications of this study for the risk assessment of formaldehyde.

In the new NTP Research Report, 2 mouse strains (note 1) haploinsufficient for TP53 were exposed to 7.5 and 15 ppm formaldehyde for 8 weeks and killed 32 weeks later at ~ 50 weeks of age.² At termination, the NTP Research Report indicates that neither hematotoxicity nor lymphohematopoietic neoplasms were observed in either strain.² $Tp53^{+/-}$ mice were designed such that shortened cancer bioassays could be conducted due to their increased sensitivity to carcinogens—particularly genotoxic carcinogens.³ These mouse strains are also reported to develop spontaneous lymphomas³ and serve as

models for lymphohematopoietic tumors in short-term studies.² These findings lend additional weight to the evidence that inhaled formaldehyde is not leukemogenic—including reanalysis of epidemiological studies⁴ and animal studies that indicate that inhaled formaldehyde does not distribute beyond the nasal cavity or reach the blood or bone marrow.⁵

The new NTP Research Report also provides important insight into the mode of action (MOA) for nasal tumors in rodents. Formaldehyde-induced nasal tumor formation is well-documented in rats at ≥ 6 ppm, and research indicates that tumors arise in nasal regions where there is cytotoxicity and regenerative hyperplasia. Research into the MOA for nasal tumors led to the development of one of the few biologically based dose-response (BBDR) models ever developed for use in risk assessment. The BBDR model and supporting research indicate that the tumor response in rats is most likely driven by increased cytotoxicity-induced regenerative hyperplasia with a negligible contribution from direct mutagenicity at noncytotoxic concentrations. Subsequent in vivo genotoxicity studies have shown that exposure to up to 15 ppm for several weeks increases cell proliferation but not micronuclei or mutant frequency of kras or Tp53 in the nasal cavity.^{8,9} These data indicate a negligible contribution from direct mutagenicity at cytotoxic concentrations. The lack of nasal neoplasms in $Tp53^{+/-}$ mice considered well suited for detecting genotoxic carcinogens lends additional evidence that the MOA for

¹ ToxStrategies, Inc., Katy, TX, USA

formaldehyde-induced nasal tumors is unlikely to be a mutagenic MOA, as typically defined for cancer risk assessment. Importantly, the NTP study authors state that, "The primary formaldehyde-related finding was squamous metaplasia of the respiratory epithelium of the nose..." indicating that "...formaldehyde caused significant injury to the nasal mucosa and cell proliferation..." These observations weaken any counterargument that the exposures were too low or too short to have potentially induced nasal tumors.

Some scientists have argued that formaldehyde induces nasal tumors via a mutagenic MOA, citing evidence for labeled DNAprotein cross-links and DNA adducts in nasal tissue following inhalation of isotope labeled formaldehyde, in vitro evidence of genotoxicity, and variable evidence for genotoxicity in exfoliated nasal and buccal cells as well as lymphocytes of humans occupationally exposed to formaldehyde. Additionally, recent studies demonstrate that endogenous formaldehyde is genotoxic in mice genetically engineered to be susceptible to formaldehyde due to increased production, decreased detoxification, compromised DNA repair, or some combination thereof. 10 However, as Speit et al⁸ have noted, the absence of genotoxicity in nasal tissue of rats following inhalation exposure suggests that inhaled formaldehyde does not readily reach basal cells lining the nasal mucosa or that formaldehyde-induced DNA adducts and crosslinks are readily repaired. The lack of nasal neoplasms in $Tp53^{+/}$ mice seems consistent with this view.

In a vacuum, the new NTP Research Report does not exclude the possibility of a mutagenic MOA for nasal tumors. However, considered along with the broader in vivo data on formaldehyde, the weight of evidence supports the use of nonlinear approaches for estimating risks from exposure to environmental levels of formaldehyde. Indeed, the WHO argues that protection against the irritant effects of inhaled formaldehyde is protective against more severe effects such as cancer. The new government-funded research in $Tp53^{+/-}$ mice further supports the argument that noncytotoxic concentrations of formaldehyde pose little/no carcinogenic risk. These important new findings should be considered by regulatory agencies currently assessing the carcinogenic risk of inhaled formaldehyde.

Ryan, Larry Schafer here with Playmaker Strategies, we represent a handful of companies that produce over 300 million gallons of biodiesel. Our clients, Gene Gebolys from World Energy and Scott Lewis from Biox will be in Washington DC on Thursday, April 13 and Friday, April 14. Mr. Gebolys and Mr. Lewis run well-established biodiesel companies -combined these two companies have plants in five states and Canada (Texas, Mississippi, Georgia, Pennsylvania, Massachusetts and Ontario) We would like to bring them by for a short meeting to discuss the 2018 Renewable Fuels Standards (RFS) and specifically the Advanced Biofuels part of that program. Might you have a few minutes to meet on either of those days? Please let us know. Thank you. We can be reached by email at Lschafer@playmakerstrategies.com

We can be reached by email at Lschafer@playmakerstrategies.com <mailto:Lschafer@playmakerstrategies.com > or telephone at 202.997.8072.

Background:

By May 15, EPA must submit a plan to the Federal Court that describes how we will comply with the Judge's order to comply with Section 321 of the Clean Air Act. The court order requires EPA to complete a major study of the electric power and coal mining sectors by July 1. And by the end of the calendar year, we need to submit evidence that we are instituting an Economic Dislocation Early Warning System -- aimed at

identifying facilities threatened to close as a result of environmental regulation (covering the whole economy).

Landfill Air Rules Summary.docx

Show Time As Busy

Attendees

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear Security.

EPA Contact: For an escort from Security to the meeting call (202) 564-4332; for all other matters call Robin Kime (202)564-6587.

Dear Ms. Dravis and Mr. Sugiyama:

At the suggestion of Al Collins of Occidental Petroleum (Oxy), who met with you last week and now sings your praises, I am writing to request a meeting with you at your earliest convenience to discuss a set of rules promulgated by EPA pursuant to Section 111 (b) and (d) of the Clean Air Act that impose revised performance standards for both new and existing municipal solid waste (MSW) landfills. The regulations were promulgated as part of President Obama's Climate Action Plan: Strategy to Reduce Methane Emissions.

Waste Management, along with Republic Services, the National Waste & Recycling Association and the Solid Waste Association of North America (associations representing both public and private organizations and professionals) identified a number of substantial issues of law and policy with the new rules, including overlap and conflict with existing rules governing the same landfill sources. We have asked EPA to stay, reconsider and revise the two climate-related rules. We petitioners have also challenged the new rules in the U.S. Court of Appeals for the D.C. Circuit.

The landfill rules share similarities with other regulations that EPA may reevaluate, including the Clean Power Plan and Oil & Gas Rules:

- * The new rule for existing landfills relies on the same Section 111(d) authority for which the Clean Power Plan has been criticized; and
- * The cost/benefit analyses underpinning the more stringent performance standards in the rules rely heavily on the "social cost of methane," which is derived from the "social cost of carbon."

Should the Agency decide to rethink those elements in other rules, we believe it would be advisable to reconsider the landfill rules as well. Although we petitioners are prepared to move forward with the judicial challenge, we believe a reconsideration of the rules could lead to a better outcome without the need for litigation. While rule revisions are our ultimate goal, an administrative stay of the rules under the Administrative Procedures Act is critical to avoid forcing the regulated community and the states to begin implementing these flawed rules. Many states are already engaged in developing their mandated state plans for implementation, which are due to the EPA

by May 30, so our request for a meeting is time-critical.

I am attaching a recent letter we petitioners sent to EPA prior to Administrator Pruitt's confirmation. It includes our somewhat lengthy administrative petitions. I would be happy to follow-up next week by phone to identify a convenient time on your doubtless busy schedules. Several participants will be coming from out of town, including a former colleague of Mr. Sugiyama, Mack McGuffey of Troutman Sanders, but we can be flexible in accommodating your schedules.

Thank you in advance, and I very much look forward to meeting you.

To: Gunasekara, Mandy <Gunasekara.Mandy@epa.gov <mailto:Gunasekara.Mandy@epa.gov > Cc: Bhandaram, Sundara <Sundara_Bhandaram@afandpa.org <mailto:Sundara_Bhandaram@afandpa.org> >; Dravis, Samantha <dravis.samantha@epa.gov <mailto:dravis.samantha@epa.gov> >; Greenwalt, Sarah <greenwalt.sarah@epa.gov <mailto:greenwalt.sarah@epa.gov > ; Sugiyama, George <sugiyama.george@epa.gov <mailto:sugiyama.george@epa.gov> >; Jackson, Ryan <jackson.ryan@epa.gov > Subject: Meeting Request

Dear Ms. Gunasekara:

We are writing to request a meeting with you and your colleagues to discuss a number of EPA regulations and permit requirements that we have identified as adversely affecting our member's manufacturing operations. On March 31, AF&PA filed comments in response to the Department of Commerce's Request for Information pursuant to the President's January 24 directive, and our comments discuss problems and proposed solutions related to 77 distinct rules and permit issues impeding U.S. manufacturing. Most of the comments focus on EPA issues.

AF&PA President and CEO Donna Harman has requested a meeting with Administrator Pruitt on behalf of several of our CEOs on May 4th, and we believe that meeting with you and other key EPA staff in advance of that meeting would enable the Administrator to be well-briefed and ensure the meeting is as productive as possible. As the issues we would like to discuss span a number of EPA offices, we have copied several of your colleagues on this message. We will facilitate your busy schedule, but the dates of April 18-21 look good for us.

Top priority issues we would like to discuss include:

- 1. Carbon Neutrality of Biomass
- 2. Air Permit Gridlock
- 3. Human Health Water Quality Criteria
- 4. EPA Procurement Guidelines for Paper and Paper Products Containing Recovered Materials/Specifications, Labels and Standards

AF&PA represents U.S. manufacturers of pulp, paper, packaging, tissue and wood products. Our industry employs 900,000 hard

working men and women, and our mills often are located in small, rural communities that need good-paying jobs. The U.S. forest products industry is very heavily regulated, but at the same time also must operate efficiently in a fiercely competitive global market.

We look forward to hearing from you soon and to discussing these important issues. Thank you for your consideration.

Best regards,

Paul Noe

Subject Meet with Peabody

Location Reserve conference room

Show Time As Busy

Mandy - I'm not sure of your familiarity with the Navajo Generating Station (NGS) in AZ, but it's sole source for coal is a Peabody coal mine. Together they employ approx. 1,000 Native American Indians.

Given the President's campaign message, it is critically important that NGS not be closed, as reps for the Salt River Project have proposed. My client, Peabody, would like to come meet with you next week regarding a recent independent study that shows a viable, profitable path forward for NGS. Bureau of Reclamation owns 24% of NGS, FYI, and we've met with DoI officials incl Scott Cameron, and Sec. Zinke.

Please let me know if you have time to visit next week. Thanks very much for your consideration. Appreciated.

Thanks, Scott

Scott D. Mason Sr Policy Advisor Holland & Knight

Location WJC-North 3412 (The Deputy Administrator's Office)

Show Time As Tentative

Somehow, we managed to let our Acting Deputy Administrator's birthday pass by without recognition. To make up for it, please come down to the Deputy's office at 12:30 today to sing the birthday song for the sake of Mike's embarrassment, and let's all eat a cookie together.

AND Shhhhhhhl! Keep it quiet. He told me he didn't want me to do anything, but I know he was lying.

PS: Please forward if you see someone's name missing.

Thanks so much for the time on Wednesday – Our folks really appreciate it, especially during a crazy week.

Here's some background info https://goo.gl/84NqPi on one item we discussed. Our next leadership call is tentatively scheduled for 2:00 on April 20.

Have a great weekend, and don't hesitate to call if we can be helpful.

Time 9:00 AM – 10:00 AM

Subject Ken Riddle Conference re: Fuel Buyers Conference

Show Time As Tentative

Mandy,

Would you be available on Friday morning for a conference call with myself and Tory Bombard to set up the details of your visit to the Eastern Fuel Buyers conference? We should be able to finalize the details then.

Ken Riddle

Supervisor of Chemical Processes

Lakeland Electric

3030 East Lake Parker Drive

Lakeland, FL 33805 (863)-834-5639 Office

Maps for Ozone QA assessment on 2013-2015 data (002).pptx

Show Time As Busy

Hi Mandy-

We think the issue you raised below is an outgrowth of the OIG Management Alert issued February 6 of this year which found some concerns with Q/A of ozone monitoring data. We responded as part of standard practice to the OIG with a letter that noted that we found the issues raised in the Alert were not significant – ie, "based on our analysis so far, we believe that the vast majority of the most recent available ozone air monitoring data are not impacted by these findings and, thus, the ozone designation process should not be affected." Related to the Alert, we conducted further analysis of recent ozone air quality data and determined that data quality criteria were not met for 14% of the monitors in the national network for the period 2013-2015 – see attached Word document and PowerPoint slides. It looks to me that what you heard was a result of this follow-up analysis. I am copying Mike Koerber on this note (and Steve Page), and Mike can provide further context and walk you through this.

Thanks Sarah

Why don't we try and set it up as a call-in number? There is possibility I may be able to have Stephen Faehner join, who is head of the Executive Board of PFI and runs a pellet fuel facility. So he could address any specific questions you might have on pellet fuels, etc.

My conference line is:

Passcode is (b) (b) (6)

This message contains privileged and confidential information. IF IT WAS SENT TO YOU BY MISTAKE, DO NOT READ IT. Instead, please notify the sender (or postmaster@crowell.com <mailto:postmaster@crowell.com>) by reply e-mail, and delete this e-mail. Unauthorized dissemination, forwarding or copying of this e-mail is strictly prohibited.

Just reaching out to see if you would be available for a short conversation concerning pending litigation on the wood heater/pellet fuel rule. This litigation is currently being held in abeyance at the D.C. Circuit based on the agreement of EPA and petitioners and without the objection of intervenors.

I represent the Pellet Fuels Institute (PFI); PFI separately challenged

EPA's final standards for pellet fuel on the basis that they exceed the Agency's statutory authority under CAA section 111, are arbitrary and capricious and lack a sufficient administrative record. Since the current abeyance only extends until June, it would be helpful to discuss how we might be able to engage the Agency on this matter.

I am available by phone or in person to discuss this matter; whatever works on your end. I realize that your schedule is extremely busy, but believe that it will not take very long to lay out the very substantial issues that we believe are raised by the final rule.

Subject: Regulatory Reform and Other Items

Brittany,

I read that one of your assignments is the regulatory reform task force. Consequently, I wanted to reach out on some issues of concern. I've attached an email that I sent to Ryan Jackson that raises several issues that we would like to discuss. (Separately, we are trying to arrange a meeting for Barry Russell, IPAA's President and CEO with Administrator Pruitt through Sydney Hupp.)

Obviously, events are moving quickly. I know that the Administration filed an abeyance petition on the Subpart OOO0a litigation today. There is an issue there that is related that I'd like to call to your attention. The Subpart OOO0a fugitive emissions program — with its costly Leak Detection and Repair (LDAR) requirements — is scheduled to take effect on June 3. It would be helpful if this requirement, at least, could be stayed while the Subpart OOO0 and OOO0a requirements are being reconsidered since a different approach might be developed. I know there are other provisions that are already in effect that raise similar issues.

I also spoke with Dave Rostker from the SBA Advocacy office regarding LDAR in a small business context where the issues arises in both the Subpart OOOOa and VOC Control Techniques Guidelines context. He suggested reaching out to EPA as well.

Hopefully, we can discuss these issues soon given your schedule.

Thanks for your consideration,

Lee Fuller

<mailto:Jackson.Ryan@epa.gov>>

Subject: IPAA Issues at EPA; Possible Meeting

Ryan,

I'm reaching out to you but would be happy if you point me to a preferred contact person.

After the recent Energy Executive Order, IPAA would like to discuss a number of pending issues with EPA.

Barry Russell, IPAA's President and CEO, would like to meet with Administrator Pruitt to introduce himself and IPAA. Barry worked for EPA in the 1970s before coming to IPAA.

The issues that we'd like to discuss relate to several matters.

First, EPA's actions in response to the Energy EO with regard to the methane NSPS (Subparts OOOO and OOOOa) are most important to IPAA. While currently engaged in the litigation opposing the regulations, the pathway to reconsideration and possible revision is critical. IPAA wants to be involved as soon as possible and wants to offer its cooperation.

Second, IPAA strongly supports efforts to expand and enhance delegation of regulatory authority to states. We are looking for options to be helpful in identifying pathways, working with our state cooperating associations to encourage state actions and working with Congress if there are barriers that need to be addressed.

Additionally, following are several other items – mostly directly affecting independent oil and natural gas producers – that we would like to identify as issues that we would hope EPA could address:

- 1. Control Techniques Guidelines (CTG) As a part of the Energy Executive Order, EPA is directed to reconsider the oil and natural gas methane New Source Performance Standard (NSPS) Subparts OOOO and OOOOa. When the Obama Administration proposed the NSPS, it also proposed a CTG for existing sources of Volatile Organic Compounds (VOC) in Ozone nonattainment areas. The CTG was finalized in October 2016. It should be suspended or withdrawn until the NSPS issues are resolved and determinations can be made on the appropriateness of the technology being applied to existing sources. Otherwise, the CTG will be applicable in future State Implementation Plans (SIP).
- 2. RCRA Subtitle D Consent Decree EPA agreed to a Consent Decree to settle litigation regarding mandatory duties under RCRA Subtitle D related to making determinations regarding the appropriateness of state oil and natural gas production wastes regulations. EPA has until March 2019 to respond but it should act quickly for two reasons. First, EPA's mandate to act does not require an extensive burden and the longer it takes to act, the more state programs appear to be viewed as inadequate. Second, the mandatory duties require action every three years. Action in 2017 would allow EPA to reconfirm its position in 2020 and establish a clear practice for the future.

Guidelines (ELG) – EPA finalized UOG Extraction ELG for discharges to Publicly Owned Treatment Works (POTW) in June 2016. These ELG should be based on a technology standard – Best Available Technology Economically Achievable (BATEA). EPA concluded that all discharges to POTW should be prohibited based on the availability of underground injection wells and of recycling options. Neither of these are BATEA. EPA should not be making zero discharge determinations based on its perception of other options. It should determine BATEA requirements. If the BATEA requirements are too expensive, it should be the dischargers' choice to use alternative approaches.

4. Clean Air Act Enforcement Tactics – Over the past several years, EPA's Enforcement tactics have been excessively aggressive. For example, in North Dakota where the state did not have delegation of the NSPS program for oil and natural gas production, EPA Enforcement initiated direct actions against producers with regard to its interpretation of Subpart OOOO requirements for storage vessels. This interpretation differed from those EPA technical staff had initially indicated. Using its enforcement power, EPA filed proposed penalties against a privately held producer that exceeded the value of its assets. The purpose was clear and predictable. EPA wanted to use its enforcement power to compel a limited asset company to enter into a consent agreement that would require actions that met Enforcement's interpretation of the regulation and to commit to additional actions that were beyond EPA Clean Air Act authority to require. Not only did EPA use a gap in state delegation to step over North Dakota in its zeal, but these types of enforcement tactics reflect poorly on EPA and the federal government and should be ended.

5. Ozone National Ambient Air Quality Standards (NAAQS) Revisions -The 2014 revision to the Ozone NAAQS should be reconsidered. Implementation of the 2008 revision to the Ozone NAAQS had yet to be implemented and evaluated when the 2014 revision was finalized. NAAQS attainment should be the target, not promulgating new, unachievable revisions. EPA's own data showed that the same areas it projected to fail to attain the 2008 NAAQS would fail to meet the 2014 revision. In those areas, the regulatory requirements would not change but the 2014 revision would bring new areas into nonattainment regulation. Even though EPA predicted those new areas would reach the 2014 NAAQS without additional local controls, those areas would be subject to new source permitting requirements that hamper their economic development. Where there is no compelling health benefit from a NAAQS revision - like the 2014 action – EPA should devote resources to attainment of the prior standard.

Thanks for considering this request. Please let me know how to proceed from here.

Subject Meeting with the National Sorghum Producers

Location Administrator's Office

Attachments EPA Meeting Request 4-19[2].docx

Show Time As Busy

Attendees

Name < E-mail>

Topic: First, NSP has been working with EPA since 2013 to gain approval for a sorghum oil biodiesel pathway. The Agency has the legal authority to approve this pathway but continues to request information immaterial to approval. Second, sorghum farmers have witnessed significant pesticide-related restrictions and the threat of revocation of more than half of the crop's reliable insecticides. NSP recognizes the significant challenges the coming registration reviews of important chemistries will bring.

Location: Administrator's Office

Staffing:

Attendees: JB Stewart, NSP Past Chairman, Keyes, OK; Tom Willis, NSP Board Member and CEO of Conestoga Energy, Liberal, KS; Tim Lust, NSP CEO, Lubbock, TX; and Joe Bischoff, Cornerstone Government Affairs

Subject Energy Star and SNAP Discussion with Appliance Manufacturers

Location DCRoomARN3500/OPEI

Show Time As Busy

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear Security.

For an escort from Security to the meeting call (202) 564-4332; for all other matters call Robin Kime (202)564-6587.

Meeting proposal: ENERGY STAR is moving a specification on clothes washers, which we oppose. It is critical that I ensure you are aware of what is going on and hopefully stop this action until we can talk in more detail. While this is an urgent matter, it is also very important to discuss the ENERGY STAR program broadly. At a high level, we support its moving back to DOE for our products and have discussed this with the DOE beachhead team. We have CEOs and other senior executives from the entire industry meeting in DC for our Annual Meeting from April 29-May 2. It would be very helpful if we could discuss our issues with you before that. Any time from Tuesday, April 25, to Friday, April 28 would be ideal.

Discussion Topics:

SNAP Rule Allowing Isobutane (EPA-HQ-OAR-2009-0286) & Rule 21 (bans HFCs for refrigerators in 2021)

Microfibers (Trash-Free Waters)

Material Management/Landfill Diversion/Food Waste Disposers Safe Drink Water TSCA Reform Support Counterfeit Water Filters

Attendees:

Kevin Messner, AHAM SVP of Policy & Government Relations

Charlotte Skidmore, AHAM Sr. Dir. of Environment and Sustainability Policy

Jennifer Cleary, AHAM Sr. Dir. of Regulatory Affairs

Subject Speak at ICAC Impact of elections

Show Time As Busy

Ross Eisenburg, NAM; Rick Kessler, Democratic Counsel to House E&C; Mandy Gunasekara, EPA

Mandy:

Congrats, "I think", on your new mission in life. Met with Mary Neumayr couple days back and appreciate all of you who are now on the front lines are drinking from a fire hose right now. Hang in there as the road can only get smoother!

Been trying to connect with you by phone since you're landing at EPA and hoping this email finds its way to you. Am following-up on the potential of you appearing on ICAC's May 3rd Clean Air Summit program. Have included our original email trail below as a refresher. Certainly hope you can work this into your schedule as summit attendees are aware that you have been invited and excited about getting your perspective on things.

Holler if you have any questions, need an official letter on ICAC letterhead, etc. or I can assist you in any manner to make this as user friendly for you as possible up front.

Best regards and look forward to hearing from you.

Michael

Policy against no action assurances 11 16 1984.pdf

Response to LA RVP request Version 2.docx

Response to LA RVP Version 1.docx LA RVP Itr to EPA Adm Pruitt 041017.pdf

Show Time As Busy

I will open the call 5 minutes early.

I have attached three documents

- Letter from LDEQ Sec Chuck Carr Brown to ADM Pruitt on 10 Apr
 2017
- 2. Response with Region 6 edits
- 3. Response w/o Region 6 edits

- 4. A briefing paper prepared by OAR/Region 6/OECA for Samantha Dravis on April 18th. It lays out what we viewed as a positive path forward.
- 5. The Agency's long-standing policy on the use of "no action assurances."

Note from Sam Coleman

We last communicated on this on 4/24 at 12;02 PM. Since that time, the staff at R6 and HQ have worked very hard to come up with the two response letters attached (0)(5) DPP

have attached his concerns in the form of the two text messages below:

Two texts from Chuck Car Brown.

(1/2) I like version 2 best. Can the following sentence be added as the last line in the second to last paragraph?

While this course of action is being executed, the RVP requirement for all 16 parishes can remain at remain at 9.0.

(2/2) Thanks. Just need a little more clarity regarding what the refiners need to do immediately. We can always take what was written and take the lead as the State and direct the refiners but would opt for more clarity. Great hanging out today.

(b)(5) DPP

His cell no is (b) (6)

The refiners making production changes up to now but has stated (b)(5). The production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes up to now but has stated (c) the refiners making production changes (c) the refiners making (c) the refiner

Code: (b) (6)

Location 4045, 6013, 7500, and 7530

Attachments FY17Q3All Hands Agenda.pdf

Show Time As Busy Hello OGC:

Anyone connecting to the OGC ALL Hands via Adobe Connect (link below) should not call into the 866 audio conference call in number to avoid sound feedback problems.

We would like to be able to see our remote and teleworking OGC staff on the screen via Adobe Connect, so please turn on your videocameras for this meeting.

http://epawebconferencing.acms.com/ogcallhands0504 2017/ http://epawebconferencing.acms.com/ogcallhands05042017/

OGC Colleagues: The Quarterly All Hands meeting will not be in room 1153 WJC East due to the unavailability of video-teleconference or data connections there due to the renovations of the room. However, we will stick to the May 4 date to give our invited guests time to prepare and certainty on all of our calendars.

We look forward to introducing our new Deputy General Counsels, as well as, other members of the Administrator's Office team. Also, remember if you have any questions you would like addressed by the OGC management team, but are uncomfortable raising them publicly, you should feel free to place them in the OGC suggestion box located in the 7th Floor large pantry. Thank you.

Regions: Please inform RTP on which room you will be using if connecting via video. Thank you.

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear

Security.

EPA Contact: For an escort from Security to the meeting call (202) 564-4332; for all other matters call Robin Kime (202)564-6587.

Request: I would like very much to meet with you soon regarding a few ideas we have regarding air quality reform. I have a long (I am old) history on these issues from an oil and gas industry perspective, as well as State (CO) and Federal (EPA Hdqtrs and Region 8) roles. Noble is solution-oriented and would like to bring a few ideas to your attention. Any chance of meeting next Thursday or the following week? Depending on scheduling, I may bring our EVP of Environmental to the meeting.

Subject OMB overview briefing on 2018 RVO package

Location New Exec Office Building, 10258 (725 17th St NW); call-in number

below

Show Time As Busy

Adding call-in: (b) (6) passcode: (b) (6)

Sending this out just so it shows up on folks' calendars. I'd advise getting there about 10 min early to clear security.

Once there's a call-in number, I'll add that, too.

Please let me know if you have any questions.—Ben

All,

We're having the briefing tomorrow at 4pm in the New Executive Office Building in 10258. Conference room 10258 is just outside the elevator bay on the 10th floor. There is a meeting scheduled in the conference room just prior to the 4pm meeting, but there is small reception area outside of the conference room where you can wait. Here is the link to the appointment where all attendees should submit their security clearance information. Please do so as soon as possible as we'll need to submit this tomorrow morning so attendees can be cleared into the building.

https://events.whitehouse.gov/form?rid=XQTCHM2KDK. We may have a call-in number as I imagine that some of the agencies who will be reviewing may not be able to send people over on such short notice. I'll send the call-in info in a later email.

Contact:

Scott A. Kamins

Kamins Consulting

(202) 660-2746

Request:

I wanted to pass along a few letters that you may or may not have already seen. I've attached letters from the Colorado Oil and Gas Association, the Colorado Association of Commerce and Industry and the Colorado Petroleum Association. I understand you may have also received similar letters from North Dakota industry associations. They address an issue that we've been talking about for quite a while, the need to reevaluate the previous Administration's campaign against oil and gas operators and return primary control to the States, as intended under the Clean Air Act. As we've discussed many times, we are simply advocating for a return to regular order and the type of "cooperative federalism" that the Administrator so ably champions at every opportunity.

Subject Brian Mormino, Executive Director - Worldwide Environmental

Strategy & Compliance (re: Commercial Vehicle Manufacturers)

Location 3412 WJC-N

Show Time As Busy

Sharnett, we have an additional participant for the meeting on Monday (May 15) at 3:30 pm. Her is the full list:

- * Steve Berry, Volvo
- * Brian Mormino, Cummins
- * Paul Feenstra, PACCAR
- * Sean Waters, Daimler
- * Jed Mandel, EMA
- * Jason Quaranto, Navistar

Hello Sharnett. Hope you are doing well. We are preparing for our meeting with Ryan Jackson for Monday, May 15th at 3:30 pm. 3 questions:

- 1. We understand that Mandy Gunasekara will also join the meeting which is great. Will anyone else from EPA attend?
- 2. Can you provide details on where we will meet?
- 3. Do you need information from us on attendees or anything else?

Thanks for your help. See you soon!

From: Brian C Mormino

Subject: Commercial Vehicle Manufacturers Mtg Request - April 19

Ryan, I hope you are doing well with your transition to the EPA. I will be visiting Washington, DC with several of my colleagues in the commercial vehicle industry and hope that you could meet with us on Wednesday, April 19th.

The participants in the meeting would be the President of the Truck and Engine Manufacturers Association (EMA) and executives from the major manufacturers – Cummins, Navistar, Paccar, Daimler and Volvo. Our intent is to discuss industry regulatory issues including the Phase 2 Fuel Efficiency and Greenhouse Gas regulations and the potential for a future low NOx rule.

We can be flexible on the timing for a meeting on April 19th. We are hoping that you would also invite other leaders in the Agency that could contribute to the discussion.

Please let me know what time would work and thanks for your

consideration,

Brian

wrote:

Dear Mandy,

Your father, Mike, and I have been friends for some time now, and he suggested I contact you regarding a notice of an EPA violation and subsequent EPA and Structural Steel Services (SSS) correspondence.

I have attached the original Notice of Violation which we received on Aug 14, 2016 and the recent email from Erika White. There have been several documents exchanged. Structural Steel Services has been in business over 40 years in Meridian, MS. a family owned business employing nearly 300 people, fabricating steel for pollution control operations, natural gas facilities, and now we are fabricating beams for bridges to assist in building a better transportation system to improve the economic viability for our country. We have always complied with all rules and regulations. However, we have recently undergone a transition in personnel. Our Safety and Human Resource Director retired after 42 years. A majority of our employees have been with us many, many years. During that transition we failed to submit the required report that we have always submitted, on time, every time. We have always utilized the chemicals in question in the amounts indicated as required for this special reporting form. We have not altered our practices in any way. This was simply a clerical error, (late submission) and the report was subsequently submitted. However, as you can see we have been given a violation which allows us to either submit a SEP or pay the EPA fine. We had elected to submit a SEP, but have had no assistance from the EPA in guiding us in what would be acceptable. We continue to be told it must have nexus, but we are stymied in how nexus can be related to a clerical error. Our contacts at EPA have been Erika White, Atlanta office, Robert Bookman and Eddie Chou.

We have always been a community supporter, fabricating and building pavilions, handicapped bathrooms, and accessible buildings for the boy scout council. We have given our time, funds and expertise in matters that concern our community such as Special Olympics, State Games, college scholarships, financial support for school trips. The list goes on and on.

We would never, knowingly, violate an environmental policy. Our employees and their families come first. They live here and work here. We have always and will always be helpful partners with our families and our community.

Any assistance you can provide would be helpful and appreciated.

Show Time As Busy

Ron Minsk

Former Special Ass't to the POTUS for Energy and the Environment

Attendees: Mandy Gunasekara, Brittnay Bolen, Samantha Dravis, and

Ron Minsk

Hi Mandy,

I wanted to introduce myself and request a meeting with you to discuss the RFS point of obligation issue. I served as the energy and environment person at the White House National Economic Council under President Obama during much of the time when the RFS was being addressed. I fully appreciate the complexity of the issue and sympathize with the difficulty of the issue that you are working on now.

I have long thought that moving the point of obligation was a way to substantially strengthen the program. Doing so would promote the blending of ethanol and reduce the cost by aligning the obligation to blend and the ability to blend. EPA has seemed to acknowledge the theory but has been skeptical with respect to whether there is data to support the theory.

I addressed this issue directly in comments that I filed in the docket recently and have attached to this email. In short, I show that obligated companies that are long are far less likely to blend than obligated parties that are short, and that the best way to promote blending is to adjust the incentives by moving the point of obligation. You can see these point most clearly in Figures 6 and 7 of my comments on pages 26 and 27 of the PDF file.

Without knowing what you are inclined to do, I know that even if you

wanted to do this, you would want to be able to fully explain it. I also appreciate that there would be a lot of hard questions that stakeholders might raise. I know where you are because I have been there myself.

I would welcome the opportunity to walk you through my work and explain how I would answer the questions that I am sure you would want answers to if you want to make this change.

I am generally available to come in to meet with you. I can be reached at rminsk@earthlink.net <mailto:rminsk@earthlink.net> and by phone at

Kime, Robin; Wilburn, Michele

Subject: IMF Meeting - OITA's Fish Bowl Conference Room #31107, 3rd Floor RRB (Big Conference Room to the left of our receptionist desk as

soon as you step off the elevators)

When: Thursday, June 1, 2017 1:30 PM-2:30 PM (UTC-05:00) Eastern

Time (US & Canada).

Where: DCRoomRRB31107-1/Ronald-Reagan-Building;

DCRoomRRB31107-2/Ronald-Reagan-Building

In preparation for the meeting with the International Monetary Fund (IMF) on June 1st, please see below the questions submitted by the IMF, with an indication of the appropriate EPA office for response.

Questions submitted by the IMF:

Economic and environmental regulations

* Please share your views on the effectiveness of various EPA programs on environmental safety. How to you see the trade-off with respect to economic costs. (Office of Policy)

Policy priorities, views, and plans

* What are the main areas for reform (developing and enforcing environmental regulations, grants, research & partnerships, education)? (Office of Policy)

Please discuss views and plans with respect to:

- federal coal leases and the Stream Protection Rule (Department of Interior issues)
- the Clean Power Plan (CPP) targets for emissions of carbon dioxide (Office of Air and Radiation)
- limits on methane emissions and curbs on venting and flaring (Office of Air and Radiation)
- fuel economy and emission standards for cars and trucks; are they too onerous for the automobile industry in the EPA's assessment (Office of Air and Radiation)
- renewable fuel standard for biofuels (Office of Air and Radiation)
- Paris COP21 agreement and plans to ratify the agreement and achieve emission goals. (Office of Air and Radiation)
- * What are your views on introducing a carbon tax and a border adjustment for carbon content of imported goods? (Office of Air and Radiation)

Budget

Attendees

* Please discuss the potential implication of proposed funding cuts envisaged in the President's budget on EPA's delivery of grants, regulatory enforcement and staffing. (Office of the Chief Financial Officer)

Subject Utah Regional Haze/Call-in #(t(b) (6) Code: (b) (6)

Location DCRoomARN4045/DC-Ariel-Rios-OGC

Show Time As Tentative

This meeting is being held at EPA's HQ, in the General Counsel's conference room. The address is 1200 Pennsylvania Avenue NW, Washington, D.C. 20460. We are located directly above the Federal Triangle metro station. If driving, please come to the middle of 12th Street NW/DC, between Constitution and Pennsylvania avenue. Then walk towards the alcove. Please come into the William Jefferson Clinton North entrance on the right. When you arrive, please check in at the security desk. They will call the main line (b) (6) for someone to come and escort you to the conference room.

Subject: Introduction

Hi Brittany,

It was great to meet you at the Chamber meeting yesterday morning. I really appreciated hearing your perspective on all of the opportunities you and your team have at the agency. As we discussed, I work at Cummins and lead our government relations efforts on energy and environment issues, including truck and engine regulation for fuel efficiency and NOx.

I also mentioned that my colleague, Brian Mormino, was in town for meetings with the White House and your colleagues Ryan and Mandy (cc'd) at EPA to discuss some of these issues. I know we wanted to follow up with Mandy and keep you all in the loop on our discussions with the WH (Mike Catanzarro) regarding potential regulation streamlining and next-tier NOx, and I wanted to see if you might have time for a 30 minute meeting or call with me and Brian to fill you in on discussions.

	meeting of call with the and Brian to his you in on discussions.

▲ Time 2:00 PM − 2:30 PM

Subject Meeting with Steptoe and the Association of American Railroads on the

Point of Obligation

Location 3500 WJCN

Show Time As Busy

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear Security.

EPA Contact: For an escort from Security to the meeting call (b) (6) for all other matters call Robin Kime (b) (6)

Request: On behalf of our client, the Association of American Railroads (AAR https://www.aar.org/), I respectfully request an opportunity to meet with you to discuss the point of obligation under the Renewable Fuels Standard. AAR represents the major freight railroads, which are significant end-users of diesel fuel, and has a unique perspective to offer on this issue.

Attendees are flying in for this meeting.

- * Ian Jefferies AAR SVP Govt Relations
- * Kathy Kirmayer AAR SVP Law

Subject FW: Meeting with the Brick Industry Association

Location DCRoomARN3500/OPEI

Show Time As Tentative

----Original Appointment-----

From: Kime, Robin On Behalf Of Bolen, Brittany

Sent: Thursday, June 1, 2017 9:05 AM

To: Bolen, Brittany; smiller@bia.org; Inge, Carolyn; Wehrum, William L.;

Lovell, William; Dravis, Samantha

Subject: Meeting with the Brick Industry Association

When: Thursday, June 15, 2017 1:30 PM-2:00 PM (UTC-05:00) Eastern

Time (US & Canada).

Where: DCRoomARN3500/OPEI

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear Security.

EPA Contact: For an escort from Security to the meeting call (b) (6) for all other matters call Robin Kime (b) (6)

Request: I am writing on behalf of the Brick Industry Association (BIA) to request a meeting with Administrator Pruitt. BIA is a national trade association representing clay brick manufacturers, distributorships, and their suppliers. Two-thirds of all the brick shipped in North American is manufactured by BIA members. In addition, many BIA member companies are family-owned small businesses. Many of BIA's members are subject to a recently-promulgated National Emissions Standard for Hazardous Air Pollutants for Brick Manufacturing (i.e., the "Brick MACT"). BIA has a pending challenge to this rule in the DC Circuit. BIA does not want to discuss the litigation with the Administrator. BIA does hope to discuss with the Administrator the enormous impact that the rule is having on the industry and some of BIA's ideas as to how the rule could be improved and the burden lessened. A group of BIA members will be in Washington, DC, on Thursday, June 15. A meeting that date would be ideal. If that does not work for Administrator Pruitt, we would appreciate any suggested alternative dates.

Subject Regulatory Reform Meeting With 3M

Location 3500 WJC-N Show Time As Tentative

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 20 minutes prior to the meeting with photo IDs to clear

Security.

EPA Contact: For an escort from Security to the meeting call (b) (6) for all other matters call Robin Kime (b) (6)

Attendees:

Tom Geier, Manager, 3M Government Affairs

Paul Narog, Manager, Environmental Operations

John F. Metzger, Sr. Environmental Specialist

Request: We would like to meet with you to discuss 3M's ideas for regulatory reform, which we provided to U. S. EPA in accordance with Executive Order 13777. A number of changes that we suggested should fit nicely the dual criteria of "timing" and "simplicity" that you spoke about during today's ACC meeting. We would especially like to discuss with you how a number of the New Source Performance Standards (at 40 C.F.R. Part 60) constrain research and development, which is the lifeblood of innovative companies such as 3M, and remedies that we believe EPA can readily put in place.

Contact:

John F. Metzger, P.E. | Sr. Environmental Specialist 3M Environment, Health, Safety and Sustainability 3M Center, 224-5W-03 | St. Paul, MN 55144-1000

Subject Pence Request- Meet with Pool Cover industry- EnergyStar related

Location DCRoomARN3528/OCIR

Show Time As Busy

Pool Cover Industry Stakeholders

Mimi,

Thank you for the introduction.

Daris, good to meet you.

I represent a coalition of US domestic manufacturers in the swimming pool industry. Specifically, the custom manufacturer of swimming pool covers.

One of the larger firms is based in Westfield, Indiana.

This coalition has been engaged with the EPA for several years on a consumer awareness strategy regarding water conservation.

Wanted to approach your office on the idea of a public private partnership with the EPA and the cover manufacturers.

The group will be coming to D.C. On June 20-21.

I can get you more specific info under a separate cover.

Reason for the request is that the current, career staff at the EPA have had difficulty conceptualizing the idea of a P3 approach.

Wanted to see, given the Indiana angle, if your office could provide some support for the concept.

Let me know if I can provide further info and thank you in advance for your consideration.

Carl

Subject Meeting - Corn Oil One / EPA

Location 1200 Pennsylvania Avenue, NW (North) Please call (b) (6)

escort (3500)

Show Time As Busy

I would propose the following agenda:

- •Introduction of attendees
- •Brief description of CO1
- What and where
- •Delineation of the issue and the plight of CO1
- •Brainstorm Solutions with EPA
- Next steps

Attendees:

Robert G. Riley, Jr.

Joseph P. Riley

Joshua Andrews

AJ Moore

Devin Mogler

Ken Markowitz – not completely sure if he is attending or not yet

Overview of the issue:

- We need help from this administration to correct the wrong conclusions of the past administration
- In 2015 EPA has indicated that CO1 is a bio-intermediary
- We believe this is an erroneous conclusion we have legal and industry opinions supporting CO1 as well as scientific data backing us up
- EPA indicated for more than 2 years that a rule would be forthcoming to give bio intermediaries access to the market- no viable market access has materialized

- Other industries/feedstocks are operating in precisely the same manner as CO1 and are given access to the market
- We need help from the Trump administration to correct the wrong conclusions of the Obama administration

It will just be Bob and the only other addition may be Joseph Riley his son. Bob's full name is Robert G. Riley Jr.

I have asked about topics to be covered and I will get back to you.

Amy

Subject: RE: Virtual Intro

Morning Amy,

It looks like Wednesday, June 21 at 2:00 will work best. Let me know if that works on your end and I will confirm. Will it be just Bob or will others be attending as well? If so, I will need all attendees full names to send to security. Additionally, if you could give a brief overview of the topics to be discussed and send over any materials that we should review beforehand that would be great. Any questions just let me know.

Best,

Alex Dominguez

Policy Analyst to the Senior Advisor to the Administrator for Air and Radiation

U.S. Environmental Protection Agency 1200 Pennsylvania Ave., N.W. Washington, D.C. 20460

Hi Amy - I was informed this was going to be a face to face as Bob would
be in DC the 21/22. If this is incorrect not a problem and we can do it
over the phone.

All- As discussed, here is an invite for the follow up to our meeting last week. We will identify a conference room on Tuesday. Note that we discussed the ability to expand the invite list to key members of the trial team; I leave it to DOJ and my folks in ARLO to forward the invite to

those key folks. Please let us know if we need a call in number added to the invite.

Thanks, Kevin

Subject Alliance for Vehicle Efficiency

Location 1200 Pennsylvania Avenue, NW (North) Please call (b) (6) (Room

3528)

Show Time As Busy

Make-up from May 23

Attendees:

- * Jeff Breneman, Executive Director, Alliance for Vehicle Efficiency
- * Lee Janger, Director for Legislative and Regulatory, Alliance for Vehicle Efficiency
- * Stacey Bernards, Honeywell, Vice President for Government Relations
- * Erika Nielsen, BorgWarner, Director of Global Government Affairs
- * David Lancaster, BorgWarner, Senior Engineer

- * David Cetola, Johnson Matthey, Director of Government Affairs
- * Casey Westhoff, Umicore, Government Affairs

Discussion Topics:

- * Overview of the Alliance for Vehicle Efficiency (AVE)
- * The automobile supplier industry and where things are headed
- * EPA's Midterm evaluation of emission standards
- * AVE concerns about matters that will impact the supplier industry
- * How AVE and its members can assist EPA (What type of information the auto supplier community might be able to provide EPA to assist with the rulemaking?)

Thank you again for assisting with this meeting.

Subject Meeting with GM to Discuss Fuel Economy Standards

Location DCRoomARN3500/OPEI

Show Time As Busy

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 10 minutes prior to the meeting with photo IDs to clear Security.

EPA Contact: For an escort from Security to the meeting call (b) (6) for all other matters call Robin Kime (b) (6)

Request:

I'm GM's lead Republican managing our Federal team – I'm sorry that I don't think we've met in person yet. As you know, GM General Counsel and my boss GMNA VP for Public Policy met with the Administrator in April. I think that Mandy and Brittany were also in the meeting. We were hoping to schedule a meeting with the three of you and some of our technical folks from Detroit next week or the following regarding the fuel economy mid-term review and harmonization of EPA/NHTSA fuel economy standards.

Contact:

Victoria Emerson Barnes Executive Director, Federal Affairs

GM – Public Policy - Global Government Relations

Location 1200 Pennsylvania Avenue, NW (North) - Room 1332WJCN

Show Time As Busy

Location: 1200 Pennsylvania Avenue, NW (North) - Room 1332

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station.

EPA Contact: For an escort from Security to the meeting call (b) (6)

Alex, Please see below if you have any questions do not hesitate to let us know. We did discuss this issue with Administrator Pruitt directly in a meeting with him and Justin Schwab the last week in April. Regards, Tim

Attendees:

Don Bloss, NSP Chairman

Tom Willis - Conestoga Energy CEO

Tim Lust, NSP CEO

John Duff, NSP Renewables Director

Joe Bischoff, Cornerstone Government Affairs

Bernadette Rappold, - Legal Counsel, Greenburg Traurig

Background:

In order to be used for compliance under RFS2, biofuels must have an approved pathway. Pathways are based on GHG modeling of the production process and the feedstock used. Sorghum oil biodiesel does not have an approved pathway and thus cannot be used in biodiesel production costing our growers and industry money and leading to ethanol plants stopping the purchase of sorghum. This is a significant problem as approximately 10 sorghum ethanol plants are now extracting oil but cannot sell their oil into the valuable biodiesel market.

We have submitted three documents to EPA staff totaling 325 pages. We have been working on this issue with EPA for over 3 years. The original petition was submitted in July 2016, and follow-up submissions answering staff questions were sent in January 2017 and April 2017. We also sent follow-up answers to Aaron Levy in early May and had sorghum ethanol plant staff do the same. He assured us the questions we answered would be the last in this process. Sorghum oil biodiesel can be approved by letter and extensive modeling has already taken place, so the process should be expedited.

Background on the Meeting: Short background: First, NSP has been working with EPA since 2013 to gain approval for a sorghum oil biodiesel pathway. The Agency has the legal authority to approve this pathway but continues to request information immaterial to approval.

Long Background: NSP has been working with EPA since 2013 to gain approval for a sorghum oil pathway. For several years EPA staff maintained NSP would not be required to submit a full petition. EPA then reversed course and asked for a full petition. NSP submitted a full petition in July of 2016 after having invested significant time and funding into research to gather the data EPA requested. We believe this petition

can be approved by letter without any formal rulemaking process. In fact, EPA has multiple legal precedents in the last two years.

Despite this precedent, EPA asked for additional information in October of 2016, and NSP submitted this information in January of 2017. EPA again asked for additional information in March of 2017, and NSP submitted this information in April of 2017. This most recent submission will have no bearing on EPA's approval of this petition as the information will have a negligible impact on greenhouse gas (GHG) emissions. Per the RFS2 final rule, a fuel is considered advanced if its GHG emissions achieve a 50 percent reduction from the established baseline. Sorghum oil biodiesel is almost identical to corn oil biodiesel, and corn oil biodiesel meets this GHG reduction threshold easily having been approved in March 2010.

Every month that drags by costs sorghum farmers and ethanol plants hundreds of thousands of dollars. This has nothing to do with the philosophical debate over the RFS. This has everything to do with EPA applying the rules of the RFS in a fair and timely manner that does not discriminate against sorghum farmers and its end users.

Subject Staff Call (re: petition for stay of ozone designations delay action)

Location Number: (b) (6) Code: (b) (6)

Show Time As Busy

The enviros deadline for a response is July 11th and then they are taking their stay request to the court. I don't feel compelled to respond, but want to flag this for everyone. Happy to organize a call tomorrow morning. Does 10 am work for a call?

Subject FYI: NSPS Oil and Gas Public Hearing

Location EPA East

Show Time As Free

* Oil and Gas Public Hearing: On July 10, 2017, OAR will hold a public hearing on the Agency's proposed 3-month and 2-year stays for the Oil and Gas New Source Performance Standards and Emission Guidelines. The shorter proposed stays would fill any potential gap between the Administrative stay currently in place and the 2-year stay. The hearing will be held from 9:00 am - 4:00 pm in the EPA East Building. Over 100

speakers have already registered to speak.

Subject Meeting with Cozen O'Connor & Amazon

Location 3500 WJCN

Show Time As Busy

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station. Please arrive 10 minutes prior to the meeting with photo IDs to clear Security.

EPA Contact: For an escort from Security to the meeting call (b) (6)

for all other matters call Robin Kime (b) (6)

Attendees: Andrea Fava, Brian Huseman of Amazon, Lori Kalani and Jerry Kilgore of Cozen.

Request: I am writing to request a meeting for our client, Amazon. Carletta Ootton, who oversees Amazon's Environmental and Sustainability teams and her colleague, Andrea Fava, Public Policy Director, would like to meet with Ms. Dravis and the EPA policy team to discuss some of their initiatives, to learn more about the EPA's priorities and where Amazon might have opportunities to collaborate on issues.

Subject Speak with the Examiner

Location 3315A **Show Time As** Busy

From: John Siciliano [mailto:jsiciliano@washingtonexaminer.com

<mailto:jsiciliano@washingtonexaminer.com>]

Sent: Tuesday, July 11, 2017 5:30 PM To: Wilcox, Jahan < wilcox.jahan@epa.gov

<mailto:wilcox.jahan@epa.gov>>

Subject: media question

I sent this email yesterday to Julia and Enesta but forgot to include you. I am working on an article for next week's magazine on what EPA could be thinking in re-proposing the Clean Power Plan as part of its review of the regulation.

It's a widely held belief among stakeholders in DC that the agency will redo the CPP using just the original building block 1, heat-rate improvements at coal plants, as a means of compliance.

First, can you say anything about the heat-rate improvement idea being the course EPA will take? And second, can you outline where we are in the process of review to re-propose the rule, and when a new proposed CPP is due for release?

My deadline is Wednesday at Noon.

Location: 1200 Pennsylvania Avenue, NW (North) - Room 3528 WJCN

Show Time As Busy

Note: Meeting time has changed to 12:30PM ET

Location: 1200 Pennsylvania Avenue, NW (North) - Room 3528 WJCN

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station.

EPA Contact: For an escort from Security to the meeting call (b) (6) or (b) (6)

Request:

Ms. Greenwalt and Secretary Pruitt met with a group from the United Egg Producers and discussed the problems arising for the Egg industry out of EPCRA. At that meeting, the ongoing citizen suit against Hickman Egg Ranch was referenced as one example of the ongoing problem. The purpose of the meeting we are requesting is to go into further detail about that matter and to request the Agency's assistance in getting it resolved.

Subject 2017 ECOS-EPA Leadership Meeting **Location** WJC-N 3rd Floor, The Green Room

Show Time As Busy

Hi everyone -

The 2017 ECOS-EPA Leadership Meeting provides an opportunity, following Monday's ECOS STEP meeting, for open and robust dialogue on the federal-state relationship with the ECOS Executive Committee. It is expected that as many as 20 to 25 State Environmental Commissioners, Secretaries and Directors plan to attend. An agenda is being finalized and will be available shortly.

If you have any questions or would like additional information please do not hesitate to contact Andrea or me.

Ct: Robin Richardson, (b) (6)

Staff Ct: Andrea Barbery, (b) (6)

Thank you! Robin

Subject Senior Leadership Council Meeting - Day 1, PM only

Location WJC-N 3rd Floor, The Green Room

Show Time As Busy

Hi everyone –

An important part of the FY 2019 budget development process is the Senior Leadership Council meeting. This meeting brings together all the senior leadership, HQ and the regions, to discuss agency priorities and resource needs in order to inform decisions for the FY 2019 Budget due to OMB in mid-September. Given there are many people new to this effort, Tuesday afternoon is dedicated to hearing from the program teams to establish a common understanding before launching into Wednesday's planning and resource discussions. Wednesday's sessions begin by setting the stage with presentations and discussions on key building blocks for the FY 2019 budget followed by small group and full group discussions to identify programmatic options for consideration in the FY 2019 OMB Submission. On Thursday, updates are proposed on the First Line Supervisor Advisory Group efforts and Executive Order implementation.

An agenda with more details will follow shortly and be included in the meeting invitation. You should receive and invitation for each day since the times vary. In addition, invitations to the +1s for Wednesday, 7/19, will be sent separately.

If you have any questions please do not hesitate to reach out to Mike Flynn or me.

Thank you, Robin

Subject: RE: Corn Refiners Association (re: biogenic CO2)

Alex,

We talked a bit with Justin and David about this meeting and they suggested we see if it would be possible to get some time for a pre-brief with Mandy.

The Biogenic CO2 Coalition is engaged on a number of issues (including some pending litigation for which they may be presenting a settlement proposal). If the plan is (b) (5)

Thanks,

Subject: RE: Meeting UK representatives

Ryan,
That's great news, thank you. We're currently flexible after 3pm on Thursday or after 2.30pm on Friday. Would either suit you?
Ben on my team is coordinating the visit and can arrange with your office. My apologies for not getting back to you sooner.
Thanks,
Alex

The Administrator will be traveling next week but I'm happy to meet. Please let me know convenient times.
Ryan Jackson
Chief of Staff
U.S. EPA

On Jul 13, 2017, at 9:19 PM, "Alex.Doyle@fco.gov.uk <mailto:Alex.Doyle@fco.gov.uk> " <Alex.Doyle@fco.gov.uk</pre> <mailto:Alex.Doyle@fco.gov.uk> > wrote: Ryan, Mandy, We have Nick Bridge, the Foreign Sec's Special Representative https://www.gov.uk/government/people/nick-bridge, and Pete Betts, the UK's Director for International Energy and Climate, in the US next week (20th and 21st). Nick is a new appointment, previously the UK's ambassador to the OECD, and this is his first senior visit to the US. They have a helpful overview of the UK's position and would be excellent contacts for the EPA. I suspect a meeting with the Administrator may be a push at this notice. They've very keen to meet senior advisors in the EPA to develop an understanding of the Administrator's direction on environmental protection, energy and climate issues. I think you both met Archie Young, who works for Pete, in the margins of the G7 Environment Ministerial. I know Archie thought you would be good contacts for them to meet. It would be helpfully timed ahead of any potential visit from the Administrator to the UK. Please let me know if you are available on Thursday or Friday next week. Mandy, I know we can't meet until the week after, but any time you can make would be welcome. Thanks, Alex Alex Doyle | Head of Energy and Environment, British Embassy | Desk: 1-202-518-3205 | Cell: (b) (6) | FTN: (b) (6)

Subject Meeting with the Plastics Industry Association - Call in (b) (6)

Code: **(b) (6)**

Location 3500 WJCN

Show Time As Busy

Thank you for the introduction and welcome. The Plastics Industry Association (PLASTICS) and members of its EHS+ Committee are very much looking forward to meeting with members of EPA's Office of Policy team. This is particularly timely given last Thursday's release of the Unified Agenda.

Implementation of the amended TSCA remains a key issue, and a key theme is EPA resources. Below is a list of other important issues for our members (neither all-inclusive nor prioritized) that will also be discussed

with additional Agency offices. We'd like to focus on specific actions EPA could take that would be most helpful to our industry and that would not require changes to regulations, as well as discuss how we might address challenges that may require regulatory changes with notice and comment.

Chemical Substances

- Implementation of the amended TSCA
- TRI reporting

Air

- Ways to streamline permitting processes to help compliance assistance and reduce burdens for both regulated entities and permitting authorities
- Revisiting concepts of flexible air permitting, netting and debottlenecking, reporting frequency
- Leak detection and repair monitoring requirements for connectors
- "Once in, Always in" Policy for MACT standards
- Routine maintenance repair and replacement under NSR
- Commencing construction and beginning actual construction under NSR
- Project aggregation rulemaking (PSD and NSR)
- Air quality modeling analysis and monitoring requirements

Water

- Ways to streamline permitting processes to help compliance assistance and reduce burdens for both regulated entities and permitting authorities
- Pelletized and solid resins and wax under the SPCC component of EPA's oil spill prevention program

- Synthetic Organic Chemical Manufacturing Industry (SOCMI) wastewater proposal of 1994, amended in 2004 Waste - Petition for review of the Hazardous Waste Generators Improvements Rule, and potential options - CERCLA Superfund challenges to advancing rehabilitation POC: mgargas@plasticsindustry.org <mailto:mgargas@plasticsindustry.org> (b) (6) First Name Last Name Organization Title Scott DeFife Plastics Industry Association VP, Government Affairs Pam

To: Dravis, Samantha <dravis.samantha@epa.gov

<mailto:dravis.samantha@epa.gov>>

Cc: Bill Schuette (b) (6)

<mailto (b) (6)

I reached out to Mr. Schuette to give me your contact information because I wanted to keep Mr. Pruitt's office in the loop regarding op eds in the Washington Times. The Times will be running a section on energy. When they have asked me to submit an op-ed on the topic of ethanol, they mentioned that they would also be publishing an op-ed from Mr. Pruitt.

Attached is what I have submitted. I suspect that my views are in line with those of Mr. Pruitt, but I wanted to provide him an opportunity to comment on what I wrote. Any comments or suggestions that his office has would be welcome.

Jerry Jung

Show Time As Busy

Mandy — I am writing to confirm a meeting with you and Utility Air Regulatory Group representatives for next Thursday, July 27, at 3:00 pm to discuss the Mercury and Air Toxics Standard. UARG will be represented by Makram Jaber (H&W), Andrew Knudsen (H&W), Mikes Gears (Duke Energy) and Justin Walters (Southern Co.). Makram and Andrew are counsel to the UARG HAPs Committee. Mike and Justin are co-chairs of the UARG HAPs Committee. I also may attend. The purpose of the meeting is not to talk about the pending litigation. We are interested in talking about the rule itself.

Please feel free to contact me if you have questions or need any additional information. Thanks.

Subject EPA/TTMA Meeting (re: Trailer GHG Rule)

Location 1200 Pennsylvania Avenue, NW (North) - Room 3530 WJCN

Show Time As Busy

Location: 1200 Pennsylvania Avenue, NW (North) - Room 3530 WJCN

Directions: Please use the William Jefferson Clinton North Entrance located on your right as you exit the Federal Triangle Metro Station.

EPA Contact: For an escort from Security to the meeting call (b) (b)

Request:

Follow up on Erik's inquiry asking us to reiterate TTMA's request for a meeting with EPA on its petitions to the Agency for reconsideration of the trailer GHG rule and an administrative stay under the APA or Clean Air Act.

Discuss EPA's path forward, as the industry faces a compliance date of January 1, 2018, which requires both immediate investments to achieve compliance and will cause customers to shift business away from large manufacturers who are subject to compliance obligations and toward small volume manufacturers who have exemptions. This is creating tremendous pressure on TTMA members to do something to address compliance obligations with a rule that they believe is both unlawful and contrary to the current Administration's policy.

Although TTMA is concerned about the government's request for a 30-day extension to the abeyance of the pending litigation because that will defer the process to obtain relief from its current situation, we are

amenable to (b) (5)

Attendees:

- 1. Rick Mullininx, Executive VP, Great Dane Trailers
- 2. George Gauntt, Sr. Director of Product Innovation, Kentucky Trailers
- 3. Peter Weis, Chief Engineer, Polar Tank Trailers
- 4. Gary Fenton, VP Engineering, Stoughton Trailers
- 5. Jan Hoover, VP of Customer Solutions Engineering, Strick Trailers
- 6. Andy Tanner, President, Talbert Manufacturing
- 7. Jeff Thompson, Executive VP Engineering/Production, Timpte Trailers
- 8. John Rust, VP of Engineering, Trailking
- 9. Jeff Bennett, Executive VP Engineering, Utility Trailers
